RESPIRATORY PROTECTION

Respiratory **Protection**

**CATALOGUE**

# Respiratory Standards

In Australia and New Zealand a 'Duty of Care' requires all stakeholders to be able to identify hazards in the work environment, quantify the risk and formally (in writing and action) put into place training and controls for the proper selection and ongoing use of respiratory protective equipment.

AS/NZS 1715:2009 Selection, use and maintenance of respiratory protective equipment

This Standard sets out the principles of respiratory protection, requirements and recommendations for the selection, use and maintenance of personal Respiratory Protective Equipment (RPE) in the workplace.

AS/NZS 1716:2003 Respiratory protective devices

This Standard specifies requirements for respiratory protective devices (respirators) intended to provide, according to type, varying degrees of protection against atmospheres containing substances which may be harmful if inhaled; also, with certain types, to provide protection against atmospheres which may be deficient in oxygen. It does not give guidance on the selection, use and maintenance of respirators. This is covered in AS/NZS 1715.

The Standard also specifies requirements, performance and testing criteria to be observed in the manufacture of respirators.

## TYPES OF RESPIRATORY PROTECTION

- Air Purifying Respirators
- Respirators which filter contaminants from inhaled air.
- Disposable Respirators
- Half Face Respirators
- Full Face Respirators
- Powered Air Purifying Respirator (PAPR)
- Single use, protection against dusts, mists and fumes
- Applications
- Sawing, grinding, welding fume, bushfire smoke
- Protection against dusts, mists, fumes, gases and vapours by using specific filters
- Applications
- Painting, grinding, printing, mining
- Higher levels of respiratory protection and/or where eye or face protection is required
- Industries
- Chemical, petroleum, steel, pharmaceutical
- Higher levels of respiratory protection and/or where head, eye, face or additional comfort is required
- Industries
- Pharmaceutical, food manufacturing, foundries

### Air Supplied Respirators

Respirators that provide the user with clean air from a source independent of the ambient atmosphere, either via a compressor through a filtering system or stored as high pressure air in cylinders. Airline supplied systems shall be used in the following conditions; the ambient conditions are unknown, concentration of contaminant could be immediately dangerous to life and health (IDLH), oxygen content of the ambient air is below 19.5%, and confined, enclosed or unventilated spaces as per the risk assessment.

### Self-Contained Breathing Apparatus

- Compressed Airline Airline Escape Applications
- Emergency Response, Rescue, Confined Space Entry Applications
- Confined Space Entry, spray painting Applications
- Allows safe exit from hazardous situations

### Respiratory Hazards

Your lungs are vital to your health - if hazardous particles reach the lungs they can damage the delicate tissue and cause illness. Your body has some natural defences against airborne particulate hazards but if the contaminant is in a large enough quantity and/or made up of very small particles, these defences may be overcome, resulting in ill health and increased risk of diseases such as occupational asthma, pulmonary fibrosis and cancer.

Gases and vapours are other types of respiratory hazards. As they mix readily with the air we breathe, gases and vapours are readily inhaled and may cause direct damage to the lung tissue e.g. acid gases.

Other types (e.g. solvents, pesticides, and mercury) can enter the bloodstream via the lungs and can then be transported around the body where they can damage organs like the liver, kidneys and effect the central nervous system and at high concentrations can be lethal.

### Dusts

Solid particles suspended in the air as a result of the disintegration of matter. Dust may be generated by mechanical means e.g. drilling, sawing and sandblasting.

### Sprays and Mists

Airborne droplets - the droplets may carry substances in solution or particles in suspension. Mists are usually formed by a condensation of vapour by atomisation of a liquid.

### Smoke

Particles of low vapour pressure suspended in the air. Smoke is made up from the solid and liquid products of combustion. Smoke particles settle slowly under gravity.

### Fume

Particles forming an airborne suspension. Fuming is usually caused by the heating of a solid to such an extent that it vapourises and condenses into small particles in the surrounding air. May be termed a thermally generated particulate.

### Gas

A substance which is like air - it is neither a solid nor liquid at room temperature.

Vapour The gaseous form of a substance which is solid or liquid at room temperature.

## FILTER CLASSES AND SELECTION

Under the Standard AS/NZS 1716, filters used in respirators are required to meet certain performance levels to achieve a classification - this then allows determination of its suitability for use against specific contaminants at various concentrations as explained in AS/NZS 1715.

### PARTICLE FILTERS

Filters are tested for capture efficiency in the laboratory using a salt aerosol challenge agent. Under specified test conditions, the amount of these particles that break through the filter is measured which allows classification of the filter. Under the Standard AS/NZS 1716, there are three classes of particle filters.

#### Class Application

- P1** Used for mechanically generated particulates e.g. dust, mists, flour and silica. This class of filter is suitable for relatively "large" particles (>1 micron) released in mechanical operations e.g. sanding, drilling, cutting, sawing and crushing.
- P2** Used for mechanically and thermally generated particles e.g. welding fume. This class of filters has a higher capture efficiency to be able to effectively filter the many sub-micron sized thermally generated particles. The P2 is also the class of filter recommended for specific infection control applications e.g. H1N1 Influenza 09 (Human Swine Influenza), Tuberculosis (TB) or other infectious diseases, where they can capture biologically active airborne particles and aerosols under specified conditions.
- P3** Used for mechanically and thermally generated sub-micron particulates, viruses, bacteria and highly toxic materials e.g. Beryllium, radioactive particles. A P3 filter offers higher protection than a P2 filter however this is only achieved when the P3 filter is used in combination with a full face respirator\*.

\*NOTE: To achieve these high protection levels, any P3 filter must be worn on a full face mask or as part of a head-covering respirator. If P3 filters are fitted to any half face mask, this combination is graded by AS/NZS 1715 to perform only as well as a P2 rated filter on this mask. This is because the "weak point" of the half face mask respirator is the face seal, not the filter performance i.e. in practice most leakage on a half face mask respirator will occur around the seal on the face, not through the filters.

## GAS & VAPOUR FILTERS

Gas/Vapour filters are produced specifically for use against various gases and vapours and are tested and marked accordingly. AS/NZS 1716 uses a code/colour classification system to identify the different types of contaminants these treated carbon grains will capture.

Class	Colour	Application
A	Brown	Organic vapours with boiling points > 65°C
AX	Brown	Organic vapours with boiling points < 65°C
B	Grey	Inorganic gases
E	Yellow	Acid gases
K	Green	Ammonia
Hg	Red	Mercury
G	Brown	Organic compounds with low vapour pressure

There are also other gas filter types for other specified chemicals.

All gas/vapour filters are also rated for their absorptive capacity. In increasing capacity there are Class Aus, Class 1, Class 2 and Class 3 filters for example;

A1/B1/E1 Filter ABE - The types of contaminants the filter will capture

1 - Represents the class of absorptive capacity

The higher the class, the higher and longer the concentration they are able to deal with when fitted on the right type of respirator. By combining the two types of filters (particle and gas and vapour), we can get combination filters like A1P2, BAusP1 or A2B2E2K1P3.

For the employer or worker who is not familiar with the various factors and product features necessary to choose the correct respiratory protection, please contact our office.

### How Long Do Particle Filters Last?

As particle filters load up with the contaminant, they actually become a better filter. However, they also become harder to breathe through. The wearer will notice this increased load at some point, decide the restriction is too high and will then need to change the filter. This decision point will vary from individual to individual as some people are more sensitive to breathing load than others. So the filter should be changed when the breathing resistance becomes excessive OR if the filter is damaged in any way.

### Situations Where Particle Filters Must Not Be Used

There are several applications where particle filters should NOT be used:

- When the ambient oxygen level is not guaranteed to be > 19.5%
- For capture of gases or vapours
- When the airborne particulate contaminant concentrations are very high
- When Government Regulations require use of airline or other specific type of respirator for specific applications.

### How Do Gas & Vapour Filters Work?

These filters rely on a sorbent material to "soak up" the gas/vapour molecules. Typically a container of fine activated carbon grains is used for this. Depending on the chemical treatment of the carbon surface, this material will absorb different types of gases or vapours. AS/NZS 1716 uses a classification system to identify the different types of contaminants these treated carbon beds will capture.

### How Long Do Gas & Vapour Filters Last?

Gas and vapour filters are rated according to their absorptive capacity. In increasing capacity, the class ratings are: Aus, 1, 2 or 3. This means we can have an A1 or a B2 or a multigas type filters like an A2B2EAusK1. The service life (i.e. how long will it perform) of any gas and vapour filter is affected by many factors - concentration and identity of contaminants, breathing rates, humidity levels, ventilation, temperature, type of carbon etc.

## Situations Where Gas & Vapour Filters Must Not Be Used

There are several applications where gas and vapour filters should NOT be used:

- When the oxygen level is not guaranteed to be > 19.5%
- For capture of particles e.g. dusts, mists, fumes or fibres
- When airborne gas and vapour contaminant concentrations are very high
- When spraying materials (e.g. 2-pack paints) containing Isocyanates
- Where the contaminant(s) present cannot be captured by the gas and vapour filter
- When regulations require use of airline or other specific type of respirators for certain applications
- When the contaminant has poor warning properties

## RESPIRATOR FIT TESTING

Checking that a respirator, with a tight fitting face piece, provides an adequate seal to the wearer's face has long been considered best practice as part of a general Respiratory Protection Program.

Respirators with tight fitting face pieces include disposable respirators, half and full-face masks, including those that form part of a powered or air-fed respirator.

## WHEN TO FIT TEST

Fit testing should be carried out:

- Before the respirator is issued
- On all wearers of respirators with tight fitting face pieces where fit testing has previously not been performed

Fit testing should be repeated at appropriate times such as:

- If the wearer significantly loses or gains weight, has major dental work or sustains a major facial injury
- If a different size or model of Respiratory Protective Equipment (RPE) is specified

- At least annually or when specified by the company policy e.g. during a health surveillance check
- Fit testing is in addition to performing a fit check prior to each use as a determination of suitable fit

## FIT TEST METHODS

There are two (2) main methods of fit testing available:

### Qualitative fit testing

A pass or fail assessment of the adequacy of a respirator. A qualitative fit test determines whether or not someone can detect various scents or flavours.

### Quantitative fit testing

An assessment of the adequacy of respirator fit that uses numerical measurement of the amount of leakage into the respirator. Quantitative fit tests use a probe inside the face mask.

During both methods of testing, it is essential that the subject is free from facial hair and other items that may interfere with the face seal. Wearers with facial hair or stubble (even a few days growth) must not wear a respirator which has a tight fitting face piece.

All tests require a series of exercises to be performed during the fit test. Manufacturers' instructions for the test equipment should be followed at all times.

A record of the result of the test should be generated and retained for at least 5 years. Some schools of thought consider these records to be identifiable to an individual and related to health controls; in which case records may need to be kept for 40 years. Check with your local regulatory authorities to determine their requirements.

## FACIAL HAIR & RESPIRATORS

The effects of facial hair or beards is a common issue wherever respirators are worn. Does it matter?

The answer is clear - beards are not acceptable if close fitting respirators are worn. AS/NZS 1715 Section 7.5.3 states "individuals with stubble, a moustache, sideburns or a beard which passes between the skin and the sealing surface must not wear a respirator which requires a facial seal." This includes any close fitting respirators - full or half face pieces.

### What is the problem with beards?

Close fitting respirators need to seal tightly to the face. Gaps in the face seal allow dirty air to leak inside the respirator. Respirator filters cannot clean the air leaking through the face seal. Even a day or two's growth of stubble for some individuals can be enough to give significant leak paths for contaminants. Face seal leakage reduces the wearer's protection. It is not true to say that hair is "very fine" and aids the filtering process. The size of particles that is most dangerous to the lungs is far too small to be caught by a few human hairs.

### What is the solution?

Individuals who cannot obtain an effective face seal due to facial hair will need to wear a hood type respirator either a Powered Air Purifying Respirator (PAPR) with appropriate filters or an air supplied hood, which ever type your risk assessment or the situation dictates.

# The importance of fit.

Disposable respirators are most effective when there is a good seal between the edges of the respirator and your face. The instant this seal is broken, protection is compromised as contaminated air can leak in through any gaps.

These fitting instructions must be followed each time a 3M™ Aura™ Particulate Respirator 9300A+ Series is worn.

Make sure that your face is clean shaven. Respirators should not be worn with stubble, beards or other facial hair under the area of the face seal as these can prevent a good seal to the face.

Make sure that long hair is tied back and jewellery is removed so that it does not interfere with the seal to the face.

Noseclip should be moulded around nose and cheeks to give a good seal.

Make sure the panels are fully unfolded.

Respirator should be correctly positioned on your face and head.

Upper strap should be positioned on the crown of the head. Strap should not be twisted.

Lower strap should be positioned below the ears. Strap should not be twisted.

1. With the reverse side up and using the tab, separate the top and bottom panels of the respirator to form a cup shape. Bend slightly at the centre of the noseclip.
2. Ensure that both panels are fully unfolded.

- 3a. Cup the respirator in one hand with the open side towards your face.

- 3b. Take both straps in your other hand. Hold the respirator under your chin, with the nosepiece facing upwards and pull the straps over your head.

4. Locate the upper strap across the crown of the head and the lower strap below your ears. The straps must not be twisted. Adjust the top and bottom panels for a comfortable fit, ensuring that the panels and tab are not folded in.

5. Using both hands, mould the noseclip to the shape of the nose to ensure a close fit and a good seal. The respirator may not fit as well if you pinch the noseclip using one hand. Use two hands.

6. Perform a fit-check by covering the front of the respirator with both hands taking care not to disturb its fit.
  - If you're using an unvalved respirator, exhale sharply.
  - If you're using a valved respirator, inhale sharply.
  - If air leaks around the nose, readjust the noseclip to eliminate leakage then repeat the fit check. If air leaks at the respirator edges, work the straps back along the sides of the head to eliminate leakage then repeat the fit check.
  - If you cannot achieve a proper fit, DO NOT enter the hazardous area. Consult your supervisor.

# Disposable Respirators

## Selecting the right product.

Selecting and specifying the appropriate respiratory protective equipment can seem daunting with so many factors to consider.

Use our simple four step selection system to ensure the respirator you choose offers the correct levels of protection and comfort required.

### 1. Identify the hazards

Industry	Application	Hazard	Filter Rating
General	Sanding, cutting, drilling	Rust, metal particles, filler, concrete, stone, wood	P1
	Sanding, cutting, drilling	Crystalline silica, cement, wood, steel, paints, varnish, anti-rust coating, steel, stainless steel, anti-fouling varnish	P1
	Low temperature oil spraying, lubricating	Mineral oil, agricultural mineral oil, horticultural mineral oil, oil foam spray, metal working fluid	P2
Construction	Sanding, cutting, drilling	Crystalline silica	P1
	Plastering, tunnelling, sawing, earthmoving, carpentry	Dust, sawdust	P1
	Painting, spraying, varnishing, coating, mixing	Water based paints, roller/brush applied spray coatings, adhesives, cleaning solvents (nuisance* levels)	GP1
Metal Fabrication	Oxy-acetylene cutting, metal pouring, soldering, smelting, welding, work with glass and mineral fibres	Metal fume	P2
Welding	MIG, TIG, mild steel, zinc (autogen, MIG/MIK) Stainless steel (electrodes), soldering	Welding fume and ozone	P2
Agricultural & Forestry	Sawing, cropping, cotton ginning, feeding livestock, allergies	Wood dust, grain dust, Cotton dust, animal dander	P1
	Handling infected animals, cleaning animal sheds, composting, waste sorting	Bioaerosols, bacteria, fungus, animal dander	P2
	Spraying pesticide, herbicide, fungicide: *low vapour pressure organic compounds	Paint spray, mist, dust, pesticide (water based)	GP1
Mining & Quarrying	Drilling, blasting, plant operators	Dust	P1
	Drilling, blasting, plant operations	Diesel exhaust/smoke	P2
Healthcare	Infection control	Infectious aerosols, TB, other bacteria/virus, allergies, pollen, mould/fungus	P2, N95
Aluminium Smelting & Cleaning	Chlorine based cleaning, smelting	Acid gases	P2
	Chlorine based cleaners	Acid gases	P1
Agricultural & Forestry	Pesticide spraying, solvent cleaning, welding	Organic vapour	GP2
	Pesticide spraying, solvent cleaning	Organic vapour	GP1
Food & Beverage, Manufacturing, Pharmaceutical	Food handling, fruit & vegetable processing, manufacturing pharmaceutical - shaping, tablet formation, cleaning & maintenance	Dusts, mists and fumes generated during handling of cereal & non-cereal flours, nuts, additives, spices, condiments, coffee, sugar, egg and fish proteins, confectionery, animal & bird feed	P1
	Shaping/tablet formation, medicinal and pharmaceutical product manufacturing, cleaning & maintenance	Pharmaceuticals during the production of prescription drugs	P1

### 2. Assess the risk

- P1 is the rating given to a respirator which meets AS/NZS1716:2012 for filtering mechanically generated particles, e.g., particles formed by crushing, grinding, drilling, sanding and cutting.
- P2 is the rating given to a respirator that meets AS/NZS1716:2012 for filtering mechanically and thermally generated particles, e.g., those from welding fume. Respirators with a P2 rating are also recommended for use in certain applications against some bioaerosols such as H1N1 and H5N1 Influenza. N95 is a particulate respirator rating per the US National Institute for Occupational Safety and Health (NIOSH) 42 CFR 84.
- Type 'G' class rating is suitable for low vapour pressure (below 1.3Pa @ 25°C) organic compounds e.g. many agricultural chemicals like herbicide and pesticide.

### 3. Select the right respirator

#### Choose a valved/ unvalved respirator

Once you have selected the protection factor you require, you can then consider whether you need a cup-shaped respirator, or a foldable respirator and whether it is valved or not.

#### Benefits of a Valved Respirator

- Reduces exhalation effort
- Cooler to wear
- Stays comfortable for longer
- Less likely to mist up eyewear

#### Benefits of a Unvalved Respirator

- Lower unit cost
- Reduces potential for wearer contamination of their environment

#### Choose a style

You can choose from: Comfort, Classic and Basic Series. Specialty respirators that provide comfortable protection against particles and certain nuisance\* level gases and vapours are also part of our range as are lightweight and effective welding respirators. This wide selection enables you to select the respirator to suit your environment.

			
<b>3M™ Comfort Series</b> <ul style="list-style-type: none"> <li>• Exceptional comfort</li> <li>• Excellent compatibility with eyewear</li> <li>• Unique designs</li> </ul>	<b>3M™ Classic Series</b> <ul style="list-style-type: none"> <li>• Traditional cup shape</li> <li>• Lightweight, comfortable and effective</li> <li>• Durable collapse resistant shell</li> </ul>	<b>3M™ Welding &amp; Specialty Respirators</b> <ul style="list-style-type: none"> <li>• Activated carbon layer</li> <li>• Comfort with technology</li> <li>• High quality performance</li> </ul>	<b>3M™ Basic Series</b> <ul style="list-style-type: none"> <li>• Reliable and convenient</li> <li>• Lightweight and economical</li> <li>• Protection you can afford</li> </ul>

### 4. Fit Test

#### A respirator cannot protect you fully if it does not fit your face.

Best practice for any Personal Protective Equipment is to ensure the right fit. Proper fitting of a respirator requires the application of an accepted method of fit testing. It is recommended that wearers be fit tested in accordance with Standards Australia's document AS/NZS 1715:2009.

#### Training Offered

Correct use and appropriate maintenance of personal protective equipment (PPE) makes a major contribution towards ensuring that it provides effective protection. Our experienced sales and technical teams will help you make the most of your products. In compact training modules, they will show you and your employees how to recognize potential hazards, suggest what measures to take and help explain how to choose the appropriate protective equipment for each particular situation.

## RESPIRATORS & HYGIENE

The proper cleaning and maintenance of respirators is an important area that is commonly overlooked. All respiratory equipment needs to be in good condition to work effectively and to be able to supply the level of protection expected by the user.

Respirators should be checked before each use and fitted correctly. For reusable types, after use, they should be cleaned and inspected to ensure they are in good working order and ready for the next use.

#### Multiple Users

A common question that arises is one concerning sharing or multiple users of a respirator. Standard AS/NZS 1715 Section 7.4 addresses this issue. It says:

"Where practical, the user should be given respirators for his or her exclusive use..... for respirators on extended personal issue, a system of regular cleaning, inspection and maintenance should be provided.

Respirators not issued on a personal basis, for example SCBA, should be cleaned and disinfected after each use. No device should be issued unless it was cleaned and disinfected after its last use. Prior to re-issue, respirators should be inspected in accordance with the manufacturer's instructions to ensure correct operation of the respirator."

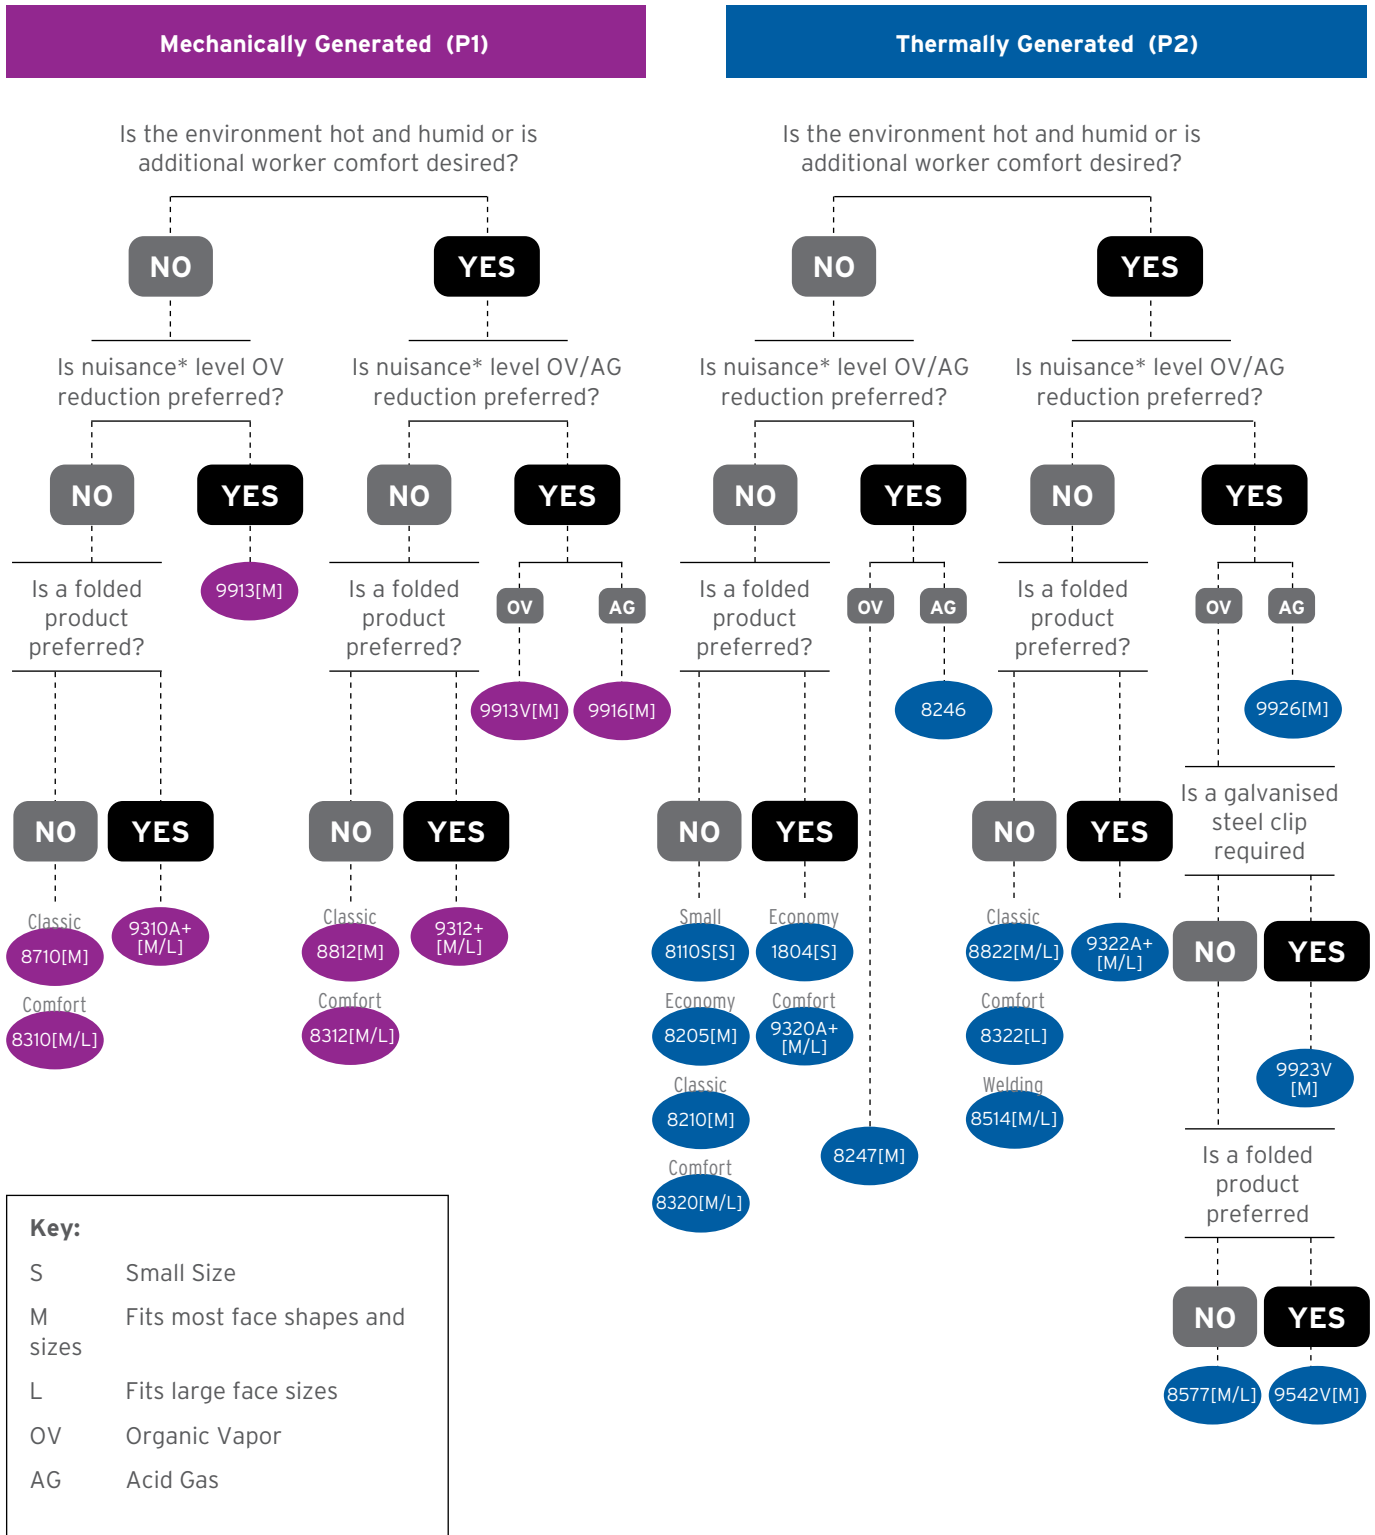

The issue of personal hygiene is important and requiring workers to share a face piece or head top is not recommended. There are situations where several employees are doing the same operation and using (not simultaneously) a single Powered Air Purifying Respirator (PAPR) or airline system. In this case, it would be possible for the employer to provide one working system (e.g. a Powered Air Purifying Respirator (PAPR) turbo unit or an airline and regulating valve) and also provide employees with their own head top or face mask to use with the Powered Air Purifying Respirator (PAPR) or airline system. Each employee involved then has ownership of his or her own head top for cleaning, maintenance and storage purposes.

# Selection flowchart

Use the selector below to identify which respirator may be preferred for increased worker comfort.

## What type of particles are in your environment?

# Disposable Respirators

## Comfort Series 9300A+ Aura™ Particulate Respirators

The 3M™ Aura™ Disposable Respirators 9300+ are the result of 3M's continuous drive to improve comfort. They are packed with ground-breaking ideas, technologies and materials and have also retained many of the features that helped make the original 9300 series hugely popular. Features include low breathing resistance filter technology for easier breathing throughout your shift, an embossed top panel to reduce fogging of eyewear, a sculpted edge for improved compatibility with eyewear and a chin tab to improve ease of fitting.

### Features and Benefits:

#### Low breathing resistance

- Combines the benefits of 3M's electret particulate filter material with advanced low breathing resistance filter technology
- Gives effective filter performance whilst lowering resistance to breathing
- Improved breathing ease and comfort

#### 3M™ Cool Flow™ valve

- Effectively removes heat build up
- Provides a cooler and more comfortable wear
- Removes exhaled air and minimises fogging of eyewear

#### Convenience

- Flat-folded: easy to store when not in use
- Hygienic individual packaging helps protect the respirator from contamination before use
- Innovative chin tab improves ease of donning and adjustment to help achieve a comfortable fit

#### Clear vision

- Embossed top panel helps reduce fogging of eyewear

#### Sculpted nose panel

- Adjustable noseclip helps provide a custom secure seal
- Curved low profile design conforms well to nose and eye contours, allowing more room for eyewear
- Helps provide a good field of vision
- Improves compatibility with eyewear

#### Face and head comfort

- Ingenious 3-panel design fits a wide range of face shapes and sizes
- Accommodates your facial movements
- Collapse resistant; ideal for work in hot, humid environments
- Stays securely in place, helping to provide a good, comfortable seal
- Large water/sweat absorbent nose foam material is soft on the skin
- Smooth inner cover web helps to create a comfortable environment for the face

Model #	Description
RP 3M 9322A+ Valved	3M™ Aura™ Particulate Respirator, P2
RP 3M 9320A+ Un-valved	3M™ Aura™ Particulate Respirator, P2
RP 3M 9312A+ Valved	3M™ Aura™ Particulate Respirator, P1
RP 3M 9310A+ Un-valved	3M™ Aura™ Particulate Respirator, P1

### Comfort Series 8300 Series Particulate Respirators

The 8300 Series is designed with your comfort in mind. The super soft, cushioned lining provides instant yet lasting comfort; whilst the robust design makes these respirators tough and durable. It also features an M shaped nose clip to make it easier to fit and be more comfortable around your nose.

RP 3M 8310	3M™ Cupped Particulate Respirator, P1

### Classic Series 8000 Series Particulate Respirators

The cupped shape, twin strap design, nose foam and nose clip help to provide comfort and fit over a range of face sizes. The 3M 8710 respirator was the first disposable respirator to be certified in AS/NZS 1716. Still widely used today, this respirator is trusted by millions of workers all over the world.

### Welding Respirator

The 3M Welding Respirator provides lightweight, effective, and comfortable respiratory protection. This durable respirator is designed specifically for welding applications to provide protection against ozone and welding fumes, plus relief from nuisance\* odours. It is resistant to clogging and does not require costly and time-consuming maintenance. Like our other disposable respirators, the welding respirator is compatible with 3M eyewear and hearing products. It is also compatible with 3M™ Speedglas™ Welding Shields.

Model #	Description
RP 3M 8514	3M™ Cupped Particulate Welding Respirator, P2, with Nuisance* Level Organic Vapour Relief, valved

### Basic Series VFlex™ Particulate Respirator

The VFlex is a unique addition to 3M's range of disposable particulate respirators. Its V-shaped pleats expand to provide a comfortable seal while giving you a spacious feel. The pleats flex with mouth movement for comfort and to maintain face seal performance.

Model #	Description
RP 3M 1804	3M™ VFlex Particulate Respirator N95 (equivalent to P2 in Australia and New Zealand)

### Specialty Respirators Acid Gas

The Acid Gas Specialty Respirators by 3M provide lightweight, effective, comfortable and hygienic respiratory protection against particles, with additional relief from nuisance\* levels of acid gases such as sulfur dioxide and hydrogen fluoride.

The cupped shape, twin strap design, foam nose seal and nose clip ensure comfortable wear over a wide range of face sizes.

Model #	Description
RP 3M 9926	3M™ Cupped Particulate Respirator, P2 with Nuisance* Level Acid Gas Relief, valved

RP 3M 9916	3M™ Cupped Particulate Respirator, P1 with Nuisance* Level Acid Gas Relief, valved

9913V

### Specialty Respirators Organic Vapour

The Organic Vapour Specialty Respirators by 3M are developed for particular working environments. These respirators feature an integrated activated carbon layer that offers relief from nuisance\* odours at concentrations below Safe Work Australia exposure standards.

They can be used for a wide variety of applications ranging from mining to weed spraying to waste sorting. The Specialty range provides lightweight, effective, comfortable and hygienic respiratory protection against particles and organic vapours.

Activated Carbon Layer

All of these specialty products offer an additional activated carbon layer to filter out ozone and nuisance\* levels of organic vapour

### Dräger Xplore Series 1720 Respirators

Dräger X-plore® 1720 is the new generation of particle filtering face pieces which offer P2 (class2) protection against fine dust and solid and liquid particles that are present in diverse application areas. With low breathing resistance, this is the ideal choice for a disposable mask. Certified to AS/NZS 1716:2012

\* Low breathing resistance with high filtering performance CoolSAFE™ filter material prevents the inhalation of small particles and bears up against high levels of exposure to dust

\* Easy to don and doff. Comfortable to wear, thanks to soft, hypoallergenic material

\* CoolIMAX™ exhalation valve for easy breathing and reduced heat build-up in the mask,

\* Flat-folded and individually packaged: saves space, easy to transport, hygienic and clean

\* Greater overall comfort for the user, even when used for long periods

Model #	Description
RP DRA 3951193	Dräger X-plore® 1720 Non Valved FFP2
RP DRA 3951084	Dräger X-plore® 1720 Valved FFP2
RP DRA 3951085	Dräger X-plore® 1720 Valved Odour FFP2

### Dräger Xplore Series 1920 Respirators

Dräger X-plore® 1900 is a high-performance, premium single-use dust mask offering P2 (class 2) protection against fine dust and particles.

The premium particle filtering mask is available in two sizes, giving exceptional comfort and optimal fit. Certified to AS/NZS 1716:2012

• CoolSAFE filter material for high filtration efficiency and low breathing resistance

• Tear-resistant VarioFLEX head straps make the mask easy to put on and take of and comfortable to wear

• Flexible nose clip and soft nose pad for a secure seal

• Three-part folding design for optimal adjustment to the face and stable positioning of the mask

• SmartFOLD design with patented double reinforcement provides increased breathing space and a sturdy mask body

Model #	Description
RP DRA 3951921	Dräger X-plore® 1920 Non Valved FFP2 Small
RP DRA 3951920	Dräger X-plore® 1920 Non Valved FFP2 Med/Large

### Dräger Xplore Series 1920 Respirators

Dräger X-plore® 1900 is a high-performance, premium single-use dust mask offering P2 (class 2) protection against fine dust and particles.

The premium particle filtering mask is available in two sizes, giving exceptional comfort and optimal fit. Certified to AS/NZS 1716:2012

• CoolSAFE filter material for high filtration efficiency and low breathing resistance

• Tear-resistant VarioFLEX head straps make the mask easy to put on and take of and comfortable to wear

• Flexible nose clip and soft nose pad for a secure seal

• CoolIMAX exhalation valve effectively releases humid and warm exhaled air to the outside

• Three-part folding design for optimal adjustment to the face and stable positioning of the mask

• SmartFOLD design with patented double reinforcement provides increased breathing space and a sturdy mask body

Model #	Description
RP DRA 3951926	Dräger X-plore® 1920 Valved FFP2 Size Small
RP DRA 3951925	Dräger X-plore® 1920 Valved FFP2 Size Med/Large

# 2-Strap Series Respirators

MORE AIR. MORE WEAR.™

- Exclusive easy-breathing wave design.
- Less resistance, better breathability.
- Larger surface area of the wave design means more airflow.
- More air and more comfort means more wear and compliance.

P2 AirWave 2-Strap  
RP MX 4200

MORE FLEX. MORE DURABILITY.

P2 AirWave SmartStrap  
RP MX 4600

Soft Foam Full Face  
Flange on the 4800  
model.

Soft Foam  
Nose Cushion

- Dura-Mesh® shell resists collapsing in heat and humidity.
- Facepiece is naturally contoured without pressure points.
- Molded nose bridge seals easily without a metal noseband.
- Softspun® lining for increased comfort.\*
- Up to two distinct sizes in industrial masks and five sizes in healthcare to address today's diverse workforce.
- Soft foam nose cushion for added comfort.\*
- Meets heat and flame resistance in accordance with AS/NZS 1716-2012.
- 100% PVC-Free.

Outer Dura-Mesh® keeps respirator cleaner looking.

Inner Dura-Mesh® helps prevent collapsing from heat and humidity.

Filter is protected on both sides by Dura-Mesh®.

Softspun® lining is comfortable against the face.

Contour shaped for comfort

Pinch Free Nose Bridge

FlexFit® design moves easily with your face and stays in place.

- Pinch-free molded nose bridge.
- Soft foam nose cushion or full face flange.
- Softspun® lining for increased comfort.
- Dura-Mesh® shell resists collapsing in heat and humidity.
- Meets heat and flame resistance in accordance with AS/NZS 1716-2012.

- ProValve exhalation valve for decreased exhalation resistance and heat stress.
- Nose flange for increased protection and facial fit, and resealable bag for hygienic storage.

QTY/PACK: 12 PIECES / QTY/CARTON: 20 BOXES

# Reusable Respirators

For prolonged periods of use, Half and Full Face Masks offer exceptional value and quality, all combine comfort with ease of use. Respirators have to pass strict quality control tests and provide a consistently high level of safety. The choice of the right mask and filter type depends on your particular working environment and individual requirements. 3M can assist you to choose the protection that helps you achieve optimum results.

## How a gas and vapour respirator cartridge works.

3M makes gas and vapour respirator cartridges to help reduce user exposure to many different organic vapours. To achieve this objective, respirator cartridges are filled with a material called activated carbon. Activated carbon is typically made from coal or renewable resources like wood or coconut shells. It is "activated" by heating the material in nitrogen or steam at approximate temperatures of 800 - 900°C. The resulting material has a significant number of micropores that help adsorb various organic vapours. These micropores can be measured and optimized for specific product needs and performance.

Coal or renewable resources, such as coconut shells

Coal or renewable resources are heated without oxygen

High-temperature steam or nitrogen activation

High-grade activated carbon

Electron micrographs of activated carbon pores

When gas and vapours are drawn through a gases and vapour cartridge, the air is filtered as vapours condense into the carbon pores. Vapours move through the cartridge from one pore to the next. This occurs more quickly for small volatile vapours with lower boiling points (e.g., acetone). Some migration of organic vapours can even occur during storage, so care must be taken before reusing the cartridge. The effective service life is the time until vapours begin to exit the cartridge.

Unlike particle filters, service life is not indicated by change in breathing resistance. Instead, cartridges must be changed according to local regulations; end-of-service-life indicator; or irritation from the contaminant; or according to 3M™ Service Life Software calculation, whichever comes first.

Activated carbon by itself cannot adsorb other types of gases or vapours such as acid gases, ammonia, formaldehyde, etc. In some cases, additional metals and salts are added to the carbon to selectively remove these compounds. For this reason, 3M offers a variety of cartridges and facepieces to help protect workers in different environments and satisfy personal preferences.

AS/NZS 1716 uses a classification system to identify the different types of contaminants these filter cartridges capture. 3M Filter cartridges follow this marking and colour coding system.

3M is committed to develop quality safety products to help protect workers. For more information about 3M gases and vapour cartridges, or to establish a cartridge change schedule, please visit [3M.com.au/ppesafety](http://3M.com.au/ppesafety).

Unfiltered organic vapours are drawn into the cartridge.

Activated carbon absorbs organic vapours on molecular level.

Service life continues until vapours begin to escape the cartridge.

## Factors that influence service life:

- Exposure concentration
- Temperature
- Humidity (water vapour takes up space in carbon pores)
- Class of filter

# How do particle filters work?

A bed of randomly oriented fibres is used to create the filter. Treated fibres can be used to attract and trap particles as they flow into and through the filter material. Increasing the thickness and capture effectiveness of the filter material increases the filter efficiency at capturing particles. Particle filters are tested according to AS/NZS1716 Section 4.3.5 and Appendix I and L. The physics of particle capture indicates that the particle size range 0.02-0.2 micron equivalent diameter is the most difficult size range to capture so the filter is tested with a sodium chloride challenge aerosol consisting of particles mainly of this size. There are four common mechanisms of filtration being interception capture, inertial impaction and diffusion capture and electrostatic attraction. In practice, particle filters designed for respiratory protection will capture particles of all sizes - the major difference is the relative performance in the range between ~0.1 and 1  $\mu\text{m}$ . Each class of filter must perform above a certain level against the test aerosol to be then classified under AS/NZS1716 as explained below.

## What's a P1, P2, P3 rating filter?

**P1 is an AS/NZS1716** rated particle filter for use with Mechanically generated particles eg particles formed by crushing, grinding, drilling, sanding, cutting etc including silica, wood dust, mists from spraying.

**P2 is an AS/NZS1716** rated particle filter for use with Mechanically and Thermally generated particles eg those from welding fume. These are also the recommended type for use with certain biological particles in certain applications eg TB, SARS.

**P3 filter** is the highest efficiency particle filter class and is used for particulates that are of high toxicity or at high concentrations. The benefit of this high efficiency filter can only be achieved on a full face mask or head covering respirator system.

## How long do particle filters last?

As particle filters load up with the contaminant, they actually become more restrictive to the passage of particles and can be a better filter. However, they also become harder to breathe through.

The wearer will notice this increased load and at some point decide that the restriction is too high and will then need to change the filter. How soon this occurs will also be dependent on the amount of particles in the breathing air.

A very dusty job will obviously clog the filter up more quickly than a relatively clean job. The change decision point will vary from individual to individual as some people are more sensitive to the increase in breathing load than others. So in summary, the filter should be changed when the breathing resistance becomes excessive to the wearer OR if the filter is damaged in any way eg by welding sparks.

## Are there situations where particle filters must not be used?

- There are several applications where particle filters should NOT be used:
- When the ambient Oxygen level is not guaranteed to be > 19.5%. Filters do not create oxygen.
- For the capture of gases or vapours - these need a specifically rated gas/vapour filter.
- When the airborne particulate contaminant concentrations are high ie greater than the standard allows for that respirator type.
- When Government Regulations require use of airline or other specific type of respirator for specific applications.

**Inertial Impaction** Dominant for large particles (>0.6 $\mu\text{m}$ )

**Interception Capture** Operative for particles greater than 0.1  $\mu\text{m}$

**Diffusion Capture** Operative for particles < 0.4  $\mu\text{m}$ , dominant for < 0.1  $\mu\text{m}$

# A respiratory solution for every task.

It's clearly recognised that we need clean air to survive and that exposure to toxins could cause irreparable damage to our health, but sometimes respiratory risks are not obvious or the damage to human respiratory systems occurs over a longer period of time, which is why choosing suitable respiratory protection is important for long term worker health.

AS/NZS 1715:2009 which covers the selection, use and maintenance of respiratory protection equipment states: "The effective management of risks to health is achieved by identifying the hazards, assessing the risk associated with those hazards and controlling the risks to health".

The following summarises the tasks needed to ensure a safe respiratory working environment.

1. Undertake a risk assessment to identify the hazard and if possible remove or reduce the hazard, which is always preferable to using Respiratory Protective Equipment (RPE). If this is not possible, appropriate RPE will need to be selected and implemented, to prevent inhalation of contaminated air.
2. A clearly defined set of selection steps must be followed to determine the type of RPE that is best suited for the job and the contaminant.

Respiratory protective devices are classified into two main groups; Air Purifying Respirators (Filtering devices) and Air Supplied Breathing Apparatus.

Where an Immediately Dangerous to Life and Health (IDLH) atmosphere is identified, air purifying respirators/filtering devices are not suitable, and self-contained and/or air supplied demand breathing apparatus must be used, due to the risk of oxygen displacing gases or other hazards where a filter may not provide appropriate protection from the hazard. RPE are given a Protection Factor (PF), which is a measure of the efficiency of the respiratory protection devices, i.e. if the content of a substance on the inside of the mask is one fiftieth of what it is in the ambient air, the respiratory protective device is said to have a Protection Factor of 50.

In addition to identifying the hazard, AS/NZS 1715:2009 states that;

- All users must be trained to use RPE
- RPE must fit properly to prevent leaks around the edges
- Fit-testing must be done before first wearing a mask
- Beards, moustaches, sideburns, stubble & long hair are not allowed when wearing a mask
- Cleaning and maintenance of RPE is required.

# Guide to identify and assess hazards.

To identify all respiratory hazards review your workplace by:  
**Task / Area / Process**

Respiratory hazards can be categorised as follows:

<p><b>Oxygen Deficiency</b></p> <hr/> <p>Less than 19.5% oxygen Eg. Confined space</p>	<p><b>Gases/ Vapours</b></p> <hr/> <p>Eg. Organic vapours, Inorganic gas, acid gas, ammonia</p>	<p><b>Particulates</b> Mechanically generated = P1 Thermally generated = P2</p> <hr/> <p>Eg. Dust/mist, metal fume, fibre, micro organism</p>	<p><b>Particulates</b> Toxic = P3 For high protection factors = P3</p> <hr/> <p>Eg. Beryllium</p>
--	---	---	---

**Risk Assessment**  
Assess Contaminants / Exposure Levels / Workplace Exposure Standard

Match Cartridge/Filter type to the hazard

<p><b>Oxygen Deficiency</b></p> <hr/> <p>Seek advice from your safety supplier for airline, built-in or SCBA options</p>	<p><b>Gases/ Vapours</b></p> <hr/> <p>Refer to page 44 of catalogue for 3M Cartridge options</p>	<p><b>Particulates</b> Mechanically generated = P1 Thermally generated = P2</p> <hr/> <p>Refer to page 44 of catalogue for 3M Filter options</p>	<p><b>Particulates</b> Toxic = P3</p> <hr/> <p>Refer to page 44 of catalogue for 3M Cartridge/Filter options</p>
--	--	--	--

**Match the Reusable Respirator to the Cartridge/Filter**

This is a guide only. Selection of the most appropriate personal protective equipment (PPE) will depend on the particular situation and exposure levels and should be made only by a competent person knowledgeable of the assessed risks, actual working conditions and limitations of PPE. Details regarding performance and limitations are set out on the product packaging and user information.

# Hazard identification and protection recommendations.

Industry	Application	Hazard	Recommended Protection
Construction	Painting, spraying, varnishing, coating	Solvent-based paint Solvents, resins, synthetic resins Latex-paint, residual solvents Spray-on glue, foam, varnish, adhesive	A1P2
Metal Fabrication	Welding, metal cutting, metal pouring, soldering, brazing	Metal fumes	P2
	Welding - TIG, MIG and other	Metal fumes, ozone gas. Nuisance levels of organic vapour	GP2
Agriculture	Spraying low vapour pressure*** pesticides, herbicides or fungicides	Organic vapour, mist, dust	GP2
	Mixing pesticide, herbicide or fungicide or spraying organic vapours	Organic vapour, mist, dust	A1P2
Automotive	Cleaning or using organic solvents, degreasing, paint thinners and glues	Organic vapour	A1
	Brush or roller application* of 2 pack type paints	Isocyanates*	A1
Fibreglass	Laying up	Epoxy and polyester resin, amines & anhydride hardner. Methyl ethyl ketone peroxide (MEKP), styrene vapour	A1P2
	Using a chopper gun	Glass fibre, dust, resin and styrene vapour	
	Spray painting & cleaning moulds	Organic vapour and mist	
Maintenance	Disinfection, cleaning	Organic vapour, mist and dust	A1P2
		Organic vapour, formaldehyde, mist and dust	ABE1P2
Other	Handling	Ammonia (NH3)**	K
		Bacteria, spores, odours	P2
		Hydrochloric acid vapour or mist**	ABEP2
		Petroleum solvents	A2
		Sulphur dioxide**	E
		Particulates**	P2
	Hazardous goods storage/transport	Seek specialised advice from 3M	

\* For protection from Isocyanates when spraying polyurethanes/2 pack, please contact the 3M TechAssist Helpline. \*\*Also need to consider eye/face/skin protection. \*\*\*Low vapour pressure < 1.3Pa @ 25°C. P3 protection is only achieved on a full face respirator.

## Filter selection guide.

Filter Type	Colour	Main area of application
P	White	Particles: Dusts, mists, fumes, fibres, toxic particles & microorganisms (bacteria, fungi, viruses, enzymes)
A	Brown	Organic gases and vapours with boiling point >65°C. eg. Toluene, Xylene, MEK, Benzene, Alcohols
AX	Brown	Highly volatile organic solvents with boiling point <65°C. e.g. Methanol, 1,3-Butadiene, Acetaldehyde
B	Grey	Acid gases, e.g chlorine, hydrogen sulphide, hydrogen chloride
E	Yellow	Inorganic gases such as sulphur dioxide
K	Green	Ammonia and organic ammonia derivatives
Hg	Red	Mercury (vapour) and mercury compounds

Application limits for Gas & Vapour respirators (AS/NZS1715):

Half face respirators can be used up to 10 times the relevant Workplace Exposure Standards (WES) or up to 1000 ppm, whichever limit is reached first.

Full face respirators can be used up to 100 times the WES with a Class 2 filter or up to 5000 ppm, whichever limit is reached first.

A1 and A2 Cartridges are designed for use with organic vapours with a boiling point above 65°C.

AX Cartridges are used for organic vapours with a boiling point under 65°C. Note: 3M™ AX Cartridges are single use and can only be fitted to 3M™ Full face respirators.

This selection guide is only an outline designed to focus on products which may be appropriate for typical applications - it should not be used as the only means of selecting a product. Selection of the most appropriate personal protective equipment (PPE) will depend on the particular situation and exposure levels and should be made only by a competent person knowledgeable of the assessed risks, actual working conditions and limitation of PPE. Details regarding performance and limitations are set out on the product packaging and user information. If in doubt, contact a safety professional or 3M.

## 3M™ Secure-Click™ Reusable Half Face Mask HF-800SD

Designed with smart and intuitive features, the 3M™ Secure Click Half Mask Reusable Respirator HF-800SD Series helps protect workers from particulates and a wide variety of gases and vapours when used with approved 3M™ Secure Click™ filters and cartridges.

- Silicone facepiece for comfort and durability
- Work with confidence, provided by the all new Secure Click(TM) connection
- Provides one-touch button to check on seal check
- Experience the greater breathability and comfort provided by the world's first quad-flow gas and vapour or cartridge
- Speech diaphragm provides easier communication while working

Model #	Description
RP 3M HF-801SD	Small mask with speaking diaphragm for use with secure click filters and cartridges
RP 3M HF-802SD	Medium mask speaking diaphragm for use with secure click filters and cartridges
RP 3M HF-803SD	Large mask with speaking diaphragm for use with secure click filters and cartridges.

**3M™ 7500 Series Reusable Respirator**

The 3M™ Half Face Reusable Respirator 7500 Series has a soft, silicone face seal for greater comfort and durability. The 3M™ Cool Flow™ Valve helps make breathing easier and can reduce heat and moisture build-up for cool, dry comfort. Combine with a broad range of twin, lightweight 3M filters or cartridges to provide respiratory protection against particulates and a variety of gases and vapours.

- Soft, silicone facepiece for comfort and durability
- Drop down feature for added convenience during breaks
- Thin nose bridge area for reduced pressure and improved comfort
- 3M Cool Flow Exhalation valve offers reduce breathing resistance
- Respirator design helps reduce fogging when wearing eye protection
- Flexible system for use with 3M gas, vapour and particulate cartridges and filters
- Maintainable through a range of spare parts

Model	Description
RP 3M 7501B	Small for use with 3M™ 6000, 2000 & 5000 Series Filters
RP 3M 7502B	Medium for use with 3M™ 6000, 2000 & 5000 Series Filters
RP 3M 7503B	Large for use with 3M™ 6000, 2000 & 5000 Series Filters

**3M™ 6500QL Series Reusable Respirator**

- Overmolded / Low-Profile Design
- Optimum fit and comfort with three-size-adjustable head cradle
- Silicone Faceseal provides comfort and stability with a soft but firm faceseal
- 3M™ Cool Flow™ Valve for Easier breathing
- Reusable respirator with quick latch drop down mechanism for easy on and off as wearers move in and out of contaminated areas
- Textured face seal minimises slippage and improves comfort

Model #	Description
RP 3M 6501QL	Small for use with 3M™ 6000, 2000 & 5000 Series Filters
RP 3M 6502QL	Medium for use with 3M™ 6000, 2000 & 5000 Series Filters
RP 3M 6503QL	Large for use with 3M™ 6000, 2000 & 5000 Series Filters

**3M™ 6000 Series Reusable Respirator**

- Provides lightweight, easy-to-use, economical protection
- An economical choice
- Facepiece is made from soft, lightweight thermoplastic elastomer
- Head harness assembly and spare parts available

Model	Description
RP 3M 6100B	Small for use with 3M™ 6000, 2000 & 5000 Series Filters
RP 3M 6200B	Medium for use with 3M™ 6000, 2000 & 5000 Series Filters
RP 3M 6300B	Large for use with 3M™ 6000, 2000 & 5000 Series Filters

**3M™ 4000+ Series Reusable Respirator**

- Disposable, maintenance-free half face respirator
- Twin inhalation valves and large, bonded carbon filters with permanently attached particulate filters
- Easy to use as no need for assembly, maintenance or record keeping

# 3M™ Reusable Half Face Respirator Starter Kits.

These kits are designed to offer respiratory protection in a convenient and easy way - an ideal solution to get you started. The kits provide protection for a range of applications, from spray painting to sanding or welding. To avoid moisture and contaminant exposure, the respirator is housed in a handy, sealable storage container.

### 3M™ Spraying Respirator Kit 7551

A convenient respiratory kit designed for certain painting\* and spraying environments. The kit comes complete with the 3M™ Half Face Reusable 7500 Series Respirator for comfort and durability. The 3M™ Cool Flow™ Exhalation Valve reduces breathing resistance and minimizes heat build-up.  
\*Not to be used when spraying isocyanate based paints

Model #	Description
RP 3M 7551S	Spraying Respirator Kit - A1P2 Small
RP 3M 7551M	Spraying Respirator Kit - A1P2 Medium
RP 3M 7551L	Spraying Respirator Kit - A1P2 Large

### 3M™ Spraying Respirator Kit 6251

A convenient respiratory kit designed for certain painting\* and spraying environments. The kit comes complete with the 3M™ Half Face Reusable 6000 Series Respirator for comfort and durability.  
\* Not to be used when spraying isocyanate based paints

Model #	Description
RP 3M 6251S	Spraying Respirator Kit - A1P2 Small

RP 3M 6251L	Spraying Respirator Kit - A1P2 Large

### 3M™ Welding Respirator Kit 6228

Includes a 3M™ Half Face 6000 Series Respirator that is simple and lightweight.

Model #	Description
RP 3M 6228S	Spraying Respirator Kit - A1P2 Small
RP 3M 6228M	Spraying Respirator Kit - A1P2 Medium
RP 3M 6228L	Spraying Respirator Kit - A1P2 Large

### 3M™ Welding Respirator Kit 7528

Includes a 3M™ Half Face 7500 Series Respirator with special Cool Flow™ valve and soft silicone material. Ideal for working in hot and humid conditions or during prolonged use.

Model #	Description
RP 3M 7528S	Spraying Respirator Kit - A1P2 Small
RP 3M 7528M	Spraying Respirator Kit - A1P2 Medium
RP 3M 7528L	Spraying Respirator Kit - A1P2 Large

**3M™ Construction Respirator Kit 6535QL**

The kit comes complete with the 3M™ Half Face Reusable 6500QL Respirator for comfort and durability. It features 3M™ Cool Flow™ Exhalation Valve that reduces breathing resistance and minimizes heat build-up. The Quick Latch drop down mechanism provides ease in donning and doffing the face piece.

Model #	Description
RP 3M 6535QL - S	Construction Respirator Kit-P2 Small
RP 3M 6535QL - M	Construction Respirator Kit-P2 Medium
RP 3M 6535QL - L	Construction Respirator Kit-P2 Large

**3M™ Dust/Particle Respirator Kit 6225**

Includes a 3M™ Half Face 6000 Series Respirator that is simple and lightweight.

Model #	Description
RP 3M 6225S	Dust/Particle Respirator Kit-P2 Small
RP 3M 6225M	Dust/Particle Respirator Kit-P2 Medium
RP 3M 6225L	Dust/Particle Respirator Kit-P2 Large

**3M™ Asbestos/Dust Respirator Kit 7535**

A convenient respiratory kit designed for certain\*\* asbestos tasks and environments containing dust. The kit comes complete with the 3M™ Half Face Reusable Respirator 7500 Series for comfort and durability. The respirator design helps reduce fogging when wearing eye protection (eyewear included).

Model #	Description
RP 3M 7535S	Asbestos/Dust - P2/P3 Small
RP 3M 7535M	Asbestos/Dust - P2/P3 Medium
RP 3M 7535L	Asbestos/Dust - P2/P3 Large

**3M™ Multi-Gas Respirator Kit 6259**

Includes a 3M™ Half Face 6000 Series Respirator that is simple and lightweight.

\*Not to be used when spraying isocyanate based paints

Model #	Description
RP 3M 6259S	Multi-Gas Respirator Kit-A1B1E1K1P2 Small
RP 3M 6259M	Multi-Gas Respirator Kit-A1B1E1K1P2 Medium
RP 3M 6259L	Multi-Gas Respirator Kit-A1B1E1K1P2 Large

**3M™ Scott™ M98 Full Face Respirator**

- Protects against chemical, biological, radiological, nuclear (CBRN) and riot control agents
- Easy-to-use drinking device for hygienic and rapid ingestion of liquids
- Military grade mask - requires end-user declaration to be completed upon purchase
- Advanced speech diaphragm provides optimal personal communication
- Polycarbonate visor

Model #	Description
RP SCO 013010	M98 Full Face Natural Rubber harness Medium, for use with Pro2000 Filters
RP SCO 013030	M98 Full Face Textile Webbing harness Medium, for use with Pro2000 Filters
RP SCO 013031	M98 Full Face Textile Webbing harness Small, for use with Pro2000 Filters

## 3M™ 6000 Series Full Face Respirator

The 3M™ Full Face Reusable Respirator 6000 Series is simple to use and comfortable to wear. Combined with a broad range of twin, lightweight 3M™ filters or cartridges to provide respiratory protection against particulates and a variety of gases and vapours.

### Features and Benefits:

#### 3M™ Full Facepiece Respirators 6000 Series, Reusable

- Soft, silicone face seal for greater comfort and durability
- Wide field of vision
- Polycarbonate visor
- Lightweight design with silicone face seal enhances comfort and improves durability
- Unique centre adapter to direct exhaled breath and moisture downward, helps reduce debris from depositing in the valve, and allows for quick and easy cleaning
- Flexible system for use with 3M gas, vapour and particulate cartridges and filters
- Can also be used with 3M Supplied-Air Systems
- Available in four different modes; can be used with both negative and powered and supplied-air systems

Model #	Description
RP 3M 6700	Small for use with 3M™ 6000, 2000 & 5000 Series Filters
RP 3M 6800	Medium for use with 3M™ 6000, 2000 & 5000 Series Filters
RP 3M 6900	Large for use with 3M™ 6000, 2000 & 5000 Series Filters

#### 3M™ Full Face Respirator FF-400 Series

- The 3M FF-400 Series Full Face Masks are engineered to deliver maximum comfort and a wide field of view.
- Available in three sizes,
- All masks have the 3M bayonet connection system allowing connection to a broad range of twin lightweight filters
- Six point Head harness for a secure, durable fit
- Passive speaking diaphragm for clearer communication 3M Cool Flow valve helps reduce heat and moisture build up inside the face piece
- Large polycarbonate lens with a wide field of vision featuring 3M™ Scotchgard Protector coating to resist dirt, paint and stains and provides for easier cleaning and maintenance.
- Polycarbonate visor

Model #	Description
RP 3M FF-401	Ultimate FX Full Face Respirator Small - for use with 3M™ 6000, 2000 & 5000 Series Filters
RP 3M FF-402	Ultimate FX Full Face Respirator Medium - for use with 3M™ 6000, 2000 & 5000 Series Filters
RP 3M FF-403	Ultimate FX Full Face Respirator Large - for use with 3M™ 6000, 2000 & 5000 Series Filters

#### 3M™ Scott™ Promask - Single Filter Full Face Respirator

- DIN40 threaded filter connection
- Wide range of high performance Pro2000 filters available to address a variety of hazards
- Non allergenic halo butyl face piece with wide panoramic polycarbonate visor
- Five point adjustable head harness provides increased wearer comfort and fit
- Speech diaphragm provides clear and audible speech transmission
- Polycarbonate visor

Model #	Description
RP SCO 012670	Small for use with Pro2000 filters
RP SCO 012681	Medium/Large for use with Pro2000 filters

## 3M™ Reusable Full Face Respirator Starter Kit.

A convenient respiratory kit designed for certain asbestos tasks\* painting\* and spraying and environments containing dust. The kit comes complete with the 3M™ Full Face Reusable 6000 Series Respirator for comfort and durability. The respirator is simple and easy to use, well balanced and provides a wide field of vision.

3M™ Asbestos/Dust Respirator Kit 6835, P3

Model #	Description
RP 3M 6835S	Asbestos/Dust - P3 Small
RP 3M 6835M	Asbestos/Dust - P3 Medium
RP 3M 6835L	Asbestos/Dust - P3 Large

### 3M™ Gas and Vapour Cartridge Filters Series

Model #	Description
RP 3M 6051	A1 Organic Vapour
RP 3M 6055	A2 Organic Vapour
RP 3M 6057	A1B1E1 Organic Vapour/Acid Gas Cartridge
RP 3M 6054	K1 Ammonia/Methylamine Cartridge
RP 3M 6075	A1 Formaldehyde Cartridge
RP 3M 6059	A1B1E1K1 Multi Gas Cartridge
RP 3M 6096	A1E1HgP3 Organic Vapour/Acid Gas/Mercury/Chlorine/Particulate Cartridge
RP 3M 60926	A1B1E1K1 FormHF/P3 Multi Gas/Particulate
RP 3M 6098	AXP3 Organic Vapour & Particulates. For use with Full Face mask only
RP 3M 6099	A2B2E2K2HgP3+Formaldehyde. For use with Full Face mask only
RP 3M 605ii	Organic Vapour Filter with Indicator, A1

3M™ Spraying/Painting Respirator Kit 6851 A1P2

\*Not to be used when spraying isocyanate based paints

Model #	Description
RP 3M 6851S	Spraying/Painting - A1P2 Small
RP 3M 6851M	Spraying/Painting - A1P2 Medium
RP 3M 6851L	Spraying/Painting - A1P2 Large

### 3M™ Particulate Filters Series

- Made from 3M high performance filter media for effective filtration efficiency
- Lightweight and provides low breathing resistance
- Suitable for use with 3M™ 6000/7500 Series Half Face Respirators and 3M™ 6000/7000 and FF-400 Series Full Face respirators

Model #	Description
RP 3M 5925	P2 Particulate Filter
RP 3M 5935	P3** Particulate Filter
RP 3M 501A	Filter Retainer for 5925 Particulate Filter
RP 3M 502	Filter Adapters
RP 3M 6035	P2/P3** Particulate Rectangular White Filter
RP 3M 6038	P2/P3** Particulate Rectangular with Nuisance OV/AG
RP 3M 2125	P2 Particulate Disc Filter
RP 3M 2135	P2/P3** Particulate Disc Filter
RP 3M 2128	GP2 Particulate, Ozone & Nuisance Level OV/AG Disc Filter
RP 3M 2138	GP2/P3** Particulate, Ozone & Nuisance Level OV/AG Disc Filter
RP 3M 2076	P2HF Particulate & Hydrogen Fluoride Disc Filter

## Pro2000 Series DIN Filters

Model #	Description
RP SCO 052670	Pro2000 Pf 10 P3**
RP SCO 042870	Pro2000 Gf 22 A2
RP SCO 042979	Pro2000 Gf 32 A2B2E2K2
RP SCO 042970	Pro2000 Gf 32 AX
RP SCO 042670	Pro2000 Cf 22 A2-P3**
RP SCO 042671	Pro2000 Cf 22 B2-P3**
RP SCO 042674	Pro2000 Cf 22 A2B2-P3**
RP SCO 042799	Pro2000 Cf 32 A2B2E2K2-P3**
RP SCO 042770	Pro2000 Cf 22 AX-P3** For use with Full Face mask only
RP SCO 042678	Pro2000 Cf 22 A2B2E1-P3**
RP SCO 042778	Pro2000 Cf 22 A1E1Hg-P3**
RP SCO 042568	Pro2000 Cf 32 A2B2E2K2-P3** Foil Bag. For use with Full Face mask only
RP SCO 042798	Pro2000 Cf 32 A2B2E2K2Hg-P3** For use with Full Face mask only
RP SCO 052692	Pre-Filter Kit For Pro2000 Filters
RP SCO 052693	Pro2000 Filter Covers Orange Polythylene
RP SCO 042507	Filter End Caps (1Pc)
RP SCO 5052694	Filter Shower Cover

\*\*Provides P3 protection only with 3M Full Face Respirators. Provides P2 protection with half face piece respirators.

## 3M™ Secure-Click™ Cartridges and Filters

Model #	Description
RP 3M D3125	Secure Click™ Particulate Filter P2
RP 3M D3128	Secure Click™ Particulate Filter P2 with Nuisance Level OV/AG*
RP 3M D3135	Secure Click™ Particulate Filter P2/P3**
RP 3M D3138	Secure Click™ Particulate Filter P2/P3** with Nuisance Level OV/AG*
RP 3M D7925	Secure Click™ Particulate Filter P2
RP 3M D7935	Secure Click™ Particulate Filter P2/P3**
RP 3M D701	Secure Click™ Filter Retainer
RP 3M D8051	Secure Click™ Dual Flow Cartridge A1
RP 3M D8055	Secure Click™ Dual Flow Cartridge A2
RP 3M D8059	Secure Click™ Dual Flow Cartridge A1B1E1K1
RP 3M D8094	Secure Click™ Dual Flow Cartridge A1
RP 3M D8095	Secure Click™ Dual Flow Cartridge A2P3**
RP 3M HF-800-02	Secure Click™ Inhale and Exhale Valve
RP 3M HF-800-03	Secure Click™ Quantitative Fit Test Adaptor Kit
RP 3M HF-800-04	Secure Click™ Head Harness Assembly
RP 3M HF-800-05	Secure Click™ Speaking Diaphragm Assembly

Use with HF-800SD Half Face Respirator only

\*Organic Vapour/Acid Gas. \*\*Provides P3 protection only with 3M Full Face Respirators. Provides P2 protection with half face piece respirators.

# Why is fit testing so important?

The biggest contributor to reduced respiratory protection is poor fit. Checking that a respirator, with a tight fitting facepiece provides an adequate seal to the wearer's face has long been considered best practice as part of a general Respiratory Protection Program.

Reflecting this, a fit test for wearers tight fitting facepieces is required for compliance to AS/NZS 1715:2009.

Respirators with tight fitting facepieces include disposable respirators, half and full-face respirators, including those that form part of a powered or air-fed respirator.

## Fit testing should be carried out:

- Before the respirator is issued
- On all wearers of respirators with tight fitting facepieces where fit testing has previously not been performed

## Fit testing should be repeated at appropriate times such as:

- If the wearer significantly loses or gains weight, has major dental work or sustains a major facial injury
- If a different size or model of Respiratory Protective Equipment (RPE) is specified
- Annually or when specified by the company policy e.g. during a health surveillance check
- Fit testing is in addition to performing a self-fit check. Prior to entering the contaminated area, at each use, the wearer should carry out a self-fit check to test the respirator fit.

## There are two main methods of fit testing available:

- Qualitative fit testing
- Quantitative fit testing

You can contact 3M for qualitative and quantitative fit testing advice. During both methods of testing, it is essential that the person is free from facial hair and other items that may interfere with the face seal.

Wearers with facial hair or stubble (even a day's growth) must not wear a respirator which has a tight fitting facepiece. All tests require a series of exercises to be performed during the fit test. Manufacturer's instructions for the test equipment should be followed at all times.

A record of the result of the test should be generated and retained for at least 5 years. Some schools of thought consider these records to be identifiable to an individual and related to health controls; in which case records may need to be kept for 40 years. Check with your local regulatory authorities to determine their requirements.

For more information on the requirements of Fit Testing, refer to the AS/NZS 1715:2009 & ISO 16975-3.

## 3M™ Qualitative Fit Test Kits

Conduct a fit test to ensure that a respirator with a tight fitting facepiece provides an adequate seal to the wearer's face.

The 3M Qualitative Fit Test apparatus FT-10 and FT-30 are designed for fit testing disposable respirators and half face reusable respirators fitted with particulate or combination gas/vapour and particulate filters.

### Features and Benefits:

- Offers a fast and easy method for performing qualitative fit testing
- No calibration of equipment required
- No modification of facepiece required
- Training resources available, please contact your local 3M representative for more information
- Each kit contains a hood and collar assembly, two nebulisers, sensitivity solution, test solution and detailed instructions
- Replacement solutions and accessories can be purchased separately
- Available with Sweet (FT-10) or Bitter (FT-30) solutions

3M Order Code	Description
RP 3M FT-10	3M™ Qualitative Fit Test Apparatus Kit FT-10, Sweet (Saccharin)
RP 3M FT-11	3M™ Sensitivity Solution FT-11, Sweet (Saccharin)
RP 3M FT-12	3M™ Fit Test Solution FT-12, Sweet (Saccharin)
RP 3M FT-13	3M™ Fit Test Nebuliser FT-13
RP 3M FT-14	3M™ Fit Test Hood FT-14

RP 3M FT-31	3M™ Sensitivity Solution FT-31, Bitter (Bitrex)
RP 3M FT-32	3M™ Fit Test Solution FT-32, Bitter (Bitrex)

# Full Face Mask

Full face mask with excellent fit, high protection level, eye protection and very good breathing comfort for use in the toughest work environment.

The SR 200 full face mask is made of silicone and is produced in one size that will fit most face sizes. The mask is equipped with three inhalation valves and two exhalation valves, and the breathing resistance is therefore very low. The exhalation valve covers with baffles effectively protect the valves and membranes against dust and paint mist. The design and location of the exhalation valves improve the scope available for communicating. The material and pigments of the mask body are FDA- and BGA approved for exposure to provisions, which minimizes the risk of contact allergies.

The easily adjustable elastic head harness of the mask is secured to the visor frame and to the exhalation valves which, together with a large crown plate, contributes towards a comfortable and secure fit. Spherical visor with a very wide field of vision. The mask can be used either as a filtering device in combination with filters from the Sundström range of filters, or as breathing apparatus with a continuous air flow together with the SR 307 compressed air attachment.

The SR 200 can also be used as head top together with the Sundström fan unit SR 500 or SR 700. Holder for pre-filter is included. The SR 200 full face masks together with the SR 500 EX fan are approved for use in a potentially explosive atmosphere. Best stored in box SR 344 alternatively storage bag SR 339-1 or SR 339-2.

## SR 200 FULL FACE MASK

RP SEA 200 Full face mask PC  
RP SEA 200G-R Full face mask glass

# Remote Filter

Remote filter for connection gives greater freedom of movement and enables use of face shield.

The SR 905 is a remote filter holder that, together with half mask SR 900 and breathing hose SR 951 or SR 952, is included in the Sundström respiratory protective device systems conforming to EN 12083. The remote filter holder is to be equipped with filter(s). The air is inhaled through the filter and breathing hose to the half mask. The SR 905 is intended to be used in the same environments as a Sundström half mask SR 900. This gives you greater freedom of movement, less weight, and the half mask will be smaller to its size, which makes it possible to use under visors. Filters to the SR 905 is the same approved filters from Sundström filter range that is used together with half mask SR 900. The belt attachment mounts in the users own belt. Other belt options are available as accessories.

## SR 905 Remote filter holder Incl. Belt attachment

ART NO T01-3002

## SR 905 Remote filter holder + 952 twin hose art no H01-3412

Complete Remote filter holder with leather belt and twin hose for use with half mask SR 900. Includes also hose protection and spark protection.

# Half Face Mask

All half masks with excellent fit, high protection level and very good breathing comfort for use in most work environments.

**SR 100**  
HALF MASK IN THREE SIZES  
RP SEA 100S/M  
RP SEA 100M/L  
RP SEA 100L/XL

The SR 100 half mask is made of silicone in three sizes, i.e. S/M, M/L and L/XL. The mask is equipped with two exhalation valves, which ensures very low exhalation resistance. The valve covers with partitions effectively protect the exhalation membrane against dust and paint mist. The material and pigment of the mask body are approved by FDA and BGA for foods, which minimizes the risk of contact allergies. The easily adjustable elastic head harness straps of the mask are designed as a V-shaped loop and have a large dished crown plate, which contributes towards a comfortable and safe fit. The mask is used either as a filtering device in combination with filters from the Sundström range, or in combination with the SR 307 compressed air attachment which then serves as a breathing apparatus with continuous flow for connection to a compressed air supply. A pre-filter holder is supplied. Best stored in box SR 230 or storage bag SR 339.

**SR 900**  
HALF MASK IN THREE SIZES  
SR 900 Small      RP SEA 900/s  
SR 900 Medium    RP SEA 900/m  
SR 900 Large      RP SEA 900/l

The SR 900 half mask is made of thermoplastic elastomer (TPE) and polypropylene (PP) in three sizes, S, M and L. The mask is equipped with two exhalation valves, which ensures very low exhalation resistance. The valve covers with partitions effectively protect the exhalation membrane against dust and paint mist. The material and pigment of the mask body are approved by FDA for foods, which minimizes the risk of contact allergies. The easily adjustable elastic head harness straps of the mask are designed as a V-shaped loop and have a large dished crown plate, which contributes towards a comfortable and safe fit. The half mask SR 900 is used in combination with:

- Filters from the Sundström range
- Remote filter holder SR 905 according EN 12083
- The SR 307 or SR 507 compressed air attachment which then serves as a breathing apparatus with continuous flow for connection to a compressed air supply according EN 14594
- The fan unit SR 500 or SR 700 and approved filters included in the Sundström fan-assisted respiratory protective device system conforming to EN 12942
- A pre-filter holder is supplied
- Best stored in box SR 230 or storage bag SR 339

**SR 5226**  
cleaning wipes  
50p      RP SEA 170-00010

## Filters

Sundström Safety have a range of gas filters, particle filter and combined filter. Choose a suitable filter for your work and environment. The gas filter can easily be combined with a particle filter for protection from both gases and particles.

### PARTICLE FILTERS

for half and full face masks are divided into three classes depending on how effectively they can separate dust, mist and aerosols. Colour code - white.

Color code

A highly efficient filter such as the SR 510 P3 R offers protection against all types of particles such as dust, fume, fog, spray, asbestos even bacteria, viruses and radioactive dust. A higher class also covers the lower ones, i.e. P3 covers both P1 and P2. The filters are replaced when the particle filter leads to increased breathing resistance. Particle filters offer protection only against particles.

### Protection Classes with respect to efficiency

(EN 143)	(NaCl and paraffin oil)	
P1 R/NR	solid and wet particles	80 %w
P2 R/NR	solid and wet particles	94 %
P3 R/NR	solid and wet particles	99,95 %

"R" after the class means that the particle filter can be reused.

"NR" after the class means that the particle filter must not be used for more than one shift.

### COMBINATION FILTERS

Combination filters are used when gases/vapours occur simultaneously with particles, e.g. in high-pressure cleaning, spray painting, heating substances or gas condensation. Select an appropriate gas filter and combine it with a particle filter by simply pressing them together or use filters with a fixed gas and particle filter in one.

### GAS FILTERS

for half and full masks are divided into three classes on the basis of their capacity and test concentration.

### Filter Class Tested in concentrations

(EN 14387)

1	0,1 percent by volume = 1000 ppm
2	0,5 percent by volume = 5000 ppm
3	1,0 percent by volume = 10000 ppm

ppm=parts per milion

Filter type	Protects against	Color code
A	Organic gases/vapours with a boiling point above 65°C, e.g. solvent naphtha, toluene, styrene and xylene	Orange
B	Inorganic gases/vapours such as chlorine, hydrogen cyanide and hydrogen sulphide	Grey
E	Acidic gases/vapours such as sulphur dioxide and formic acid	Yellow
K	Ammonia and certain amines	Green
AX	Organic gases and vapours with a boiling point below 65°C, such as acetone, methanol and dichloromethane	Orange
HG-P3	Mercury	

Gas filters afford protection only against gases.

## Filters for half and full face mask

### RP SEA 217 GAS FILTER art no H02-2509

Gas filter SR 217, Class 1 are designed for use with Sundström half masks and full face masks. The filter are of type A and provide protection against organic gases and vapours, such as solvents, with boiling points > +65 °C. The gas filter can easily be combined with particle filter SR 510 P3 R in order to obtain protection also against aerosols (particles), e.g. during spray painting.

### RP SEA 316 GAS FILTER art no H02-4212

Gas filter SR 316, Class 1 are designed for use with Sundström half masks and full face masks. The filter are of type K and provide protection against ammonia and certain amines, such as ethylene diamine. The gas filter can easily be combined with particle filter SR 510 P3 R in order to obtain protection also against aerosols (particles), e.g. during high-pressure washing.

### RP SEA 315 GAS FILTER art no H02-3209

Gas filter SR 315 Class 1 are designed for use with Sundström half masks and full face masks. The filter are of type ABE and provide protection against the following types of gases and vapours:  
Type A protects against organic gases and vapours, such as solvents, with boiling points > +65 °C.  
Type B protects against inorganic gases and vapours, such as chlorine, hydrogen sulphide and hydrogen cyanide.  
Type E protects against acidic gases and vapours, such as sulphur dioxide and hydrogen fluoride.  
The gas filter can easily be combined with particle filter SR 510 P3 R in order to obtain protection also against aerosols (particles), e.g. during spray painting.

### RP SEA 297 GAS FILTER art no H02-5309

Gas filter SR 297, Class 1, is designed for use together with Sundström half masks and full face masks. The filter is of type ABEK and provides protection against the following types of gases and vapours:  
Type A protects against organic gases and vapours, such as solvents, with boiling points > +65 °C.  
Type B protects against inorganic gases and vapours, such as chlorine, hydrogen sulphide and hydrogen cyanide.  
Type E protects against acidic gases and vapours, such as sulphur dioxide and hydrogen fluoride.  
Type K protects against ammonia and certain amines, such as ethylene diamine.  
The gas filter can easily be combined with particle filter SR 510 P3 R in order to obtain protection also against aerosols (particles), e.g. during spray painting.

### RP SEA 218-2 GAS FILTER art no H02-2009

Gas filter SR 218 Class 2, are designed for use with Sundström half masks and full face masks. The filter are of type A and provide protection against organic gases and vapours, such as solvents, with boiling points > +65 °C. The gas filter can easily be combined with particle filter SR 510 P3 R in order to obtain protection also against aerosols (particles), e.g. during spray painting.

### RP SEA 295 GAS FILTER art no H02-4312

Gas filter SR 295 Class 2 are designed for use with Sundström half masks and full face masks. The filter are of type K and provide protection against ammonia and certain amines, such as ethylene diamine. The gas filter can easily be combined with particle filter SR 510 P3 R in order to obtain protection also against aerosols (particles), e.g. during high-pressure washing.

### RP SEA 294 GAS FILTER art no H02-3312

Gas filter SR 294, Class 2, are designed for use with Sundström half masks and full face masks. The filter are of type ABE and provide protection against the following types of gases and vapours:  
Type A protects against organic gases and vapours, such as solvents, with boiling points > +65 °C.  
Type B protects against inorganic gases and vapours, such as chlorine, hydrogen sulphide and hydrogen cyanide.  
Type E protects against acidic gases and vapours, such as sulphur dioxide and hydrogen fluoride.  
The gas filter can easily be combined with particle filter SR 510 P3 R in order to obtain protection also against aerosols (particles), e.g. during spray painting.

### RP SEA 299-2 COMBINED FILTER art no H02-6512

The SR 299-2 is a combined filter consisting of a Class 1 gas filter and Class 3 particle filter. The filter is designed for use in Sundström full face masks and half masks. The filter is of type ABEK1-Hg-P3 R and provides protection against the following types of gases, vapours and particles:  
Type A protects against organic gases and vapours, such as solvents, with boiling points > +65 °C.  
Type B protects against inorganic gases and vapours, such as chlorine, hydrogen sulphide and hydrogen cyanide.  
Type E protects against acidic gases and vapours, such as sulphur dioxide and hydrogen fluoride.  
Type K protects against ammonia and certain amines, such as ethylene diamine.  
Type Hg protects against mercury vapour. Warning. Maximum use time 50 hours.  
Type P3 R\* protects against all types of particulate pollutants, e.g. dust, mist and smoke.

\* R (Re-useable): The filter is intended to be used for more than a single shift.

**RP SEA 298**  
GAS FILTER  
art no H02-2412

Gas filter SR 298 is designed for use with Sundström half masks and full face masks. The filter is of type AX and provides protection against organic gases and vapours, such as solvents, with boiling points  $\pm$  +65 °C. The gas filter can easily be combined with particle filter SR 510 P3 R in order to obtain protection also against aerosols (particles), e.g. during spray painting.

## Filters for half and full face mask and fan units

**RP SEA 221**  
PRE-FILTER  
art no H02-0312

Pre-filter SR 221 is a disc that is meant to catch coarse particles and by that extend the lifetime of the particle filters SR 510 P3 R and SR 710 P3 R, combined filter SR 299-2 ABEK1-Hg-P3 R and SR 599 AIBE2K1-Hg-P3 R. The pre-filter is placed in the pre-filter holder and then snapped on to the particle filter or combined filter.

**RP SEA 510**  
PARTICLE FILTER  
art no H02-1309

This mechanical filter protects against all types of particles (dust, fume, fog, spray, asbestos), even bacteria, viruses and radioactive dust. The filter separates 99,997% of the pollution in the air. That means that the air is 33.000 times cleaner on the backside of the filtermedia than in the front (the standard requires 2000 times cleaner air). A new feature is the increased filterarea to 1300 cm<sup>2</sup>. It gives the filter an extremely low breathing resistans, in case 70% lower than the standard requires. This filter also fits on all Sundström filter respirator products.

### Dräger Bayonet Particle, Gas and Combination filters

The innovative Dräger X-plore® Bayonet filter series is designed for a wide range of applications. It combines modern design with low breathing resistance. With the bayonet filter is positioned on the side of the respirator mask, the wearer has a wide, uninterrupted field of vision. Broad filter range - The X-plore Bayonet filter series offers various filter types for major applications and protects against many hazardous substances. Rugged plastic housing with added waterproofness. Low breathing resistance due innovative construction and special constructed air intake.

### Dräger X-plore® 3500 Half Mask

The Dräger X-plore® 3500 delivers long lasting protection under tough conditions. A perfect combination: modern design and light weight offer you extra protection and comfort. Certified to AS/NZS 1716:2012

- Skin friendly soft material and cascade-shaped nose bridge for low pressure on face & long wearing comfort
- Large inhalation and exhalation port for breathing at low resistance
- Easily adjustable FlexiFit head harness
- The low profile Bayonet Filters ensure an excellent field of vision and avoid incorrect placement of filters
- Versatile use with a good range of filters for all application

### Dräger X-plore® 5500 Full Face Mask

The Dräger X-plore® 5500 full face mask is the right solution for environments where not only increased respiratory protection is required, but also a clear vision is mandatory. Certified to AS/NZS 1716:2012

- Excellent field of vision, high chemical, thermal and mechanical resistance
- Low profile design of the filters provides an unobstructed wide field of vision
- Double-layer face seal ensures a secure seal and the highest level of protection
- The 5-point head harness allows quick and easy donning and doffing without hair entanglement
- Ethylene Propylene Diene Monomer (EPDM) mask body offers excellent chemical and temperature resistance
- Versatile use with a good range of filters for all applications

**Dräger X-plore® 6300 EPDM RA Full face mask**

The Dräger X-plore® 6300 meets stringent requirements with regard to reliability, secure fit and comfort. An economical full face mask for professional use in industry. Certified to AS/NZS 1716:2012

- Ethylene Propylene Diene Monomer (EPDM) mask body offers excellent chemical and temperature resistance
- Double-layer face seal ensures a secure seal for every type of face, and provides the highest level of protection
- Distortion-free visor made from PMMA plexiglass with 180°-angle and wide view
- The 5-point head harness allows quick and easy donning and doffing without hair entanglement
- Standard thread connection for Rd40 filters. Versatile use with a extensive range of filters for all applications
- Inbuilt speech diaphragm for distortion-free vocal communication

### 7800 PREMIUM SILICONE HALF MASK

The 7800 Premium Silicone Half Mask has higher resistance to heat and compression, with all the enhanced comfort and durability of silicone. Moldex designed the 7000 half mask and 9000 full face series to be the most user friendly respirators on the market. The streamlined 7000/9000 feature fewer parts, minimal maintenance, and a wider field of vision.

### 7000/7800/9000 APPLICATIONS

Full range of gas/vapour cartridges for these common applications and environments

Foundries, paper, pesticides, wood products, printing, pharmaceuticals, agriculture, tobacco, mining, petrochemical, aluminum processing, textiles, glass, chemical manufacturing, paint, laboratories, utilities, cement, fiberglass, coal, fertilizer, petroleum refining, oil or water-based paints, electroplating, embalming, rendering, adhesives, construction, automotive, food processing, agriculture, mining, transportation industries, ship/boat building, health services, furniture manufacturing, primary and fabricated metal.

Common applications and environments for 7940 P2/P3 filter and 7990 P2/P3 cartridge

For contaminants where a substance specific standard applies (asbestos, lead, cadmium, inorganic arsenic, MDA) requiring a filter as well as pharmaceutical, battery, nuclear, welding, metal processing.

Common applications and environments for P2 filters

Welding, grinding, machining, bagging, buffing, cement, metal working, dusty environments, foundry, mining, poultry, sanding, wood, furniture, textiles, waste processing.

They are both ultra-light weight, durable, and economical, so maximum comfort with extended use is built-in. The award-winning 7000/9000 series add up to simple, comfortable, and economical respiratory protection that's just plain EASY TO WEAR.

### 7000/7800 FEATURES

Low profile, angled cartridge placement for wider field of vision

Contoured neck buckles for comfort and quick attachment

Compact, fits under welding helmets

Wide flange fits more facial shapes comfortably

Attached exhale cover for easy inspection

Easy mount bayonet cartridge/filter attachment

### The versatile 7000/7800 has optional drop down/lock down strap modes

7000/7800 in Drop Down Mode

Lock down mode

Drop down mode

The 7000, 7800 and 9000 share a full line of cartridges and filters

# FACEPIECES, CARTRIDGES, FILTERS & ACCESSORIES

## 8000 Facepiece

- Extra-wide sealing surface for comfort and fit.
- Low maintenance because there are no gaskets or yoke to replace.
- Easy drop down strap assembly.
- Low profile for a wide field of vision.

## 8000 Gas/Vapour and Filter Cartridges with inhale valve

- New inhalation valve with each cartridge

- 8100A Organic Vapours - A1
- 8600A Multi-Gas/Vapour Smart Cartridge - A1, B1, E1, K1
- 8030A P2/P3\* Particulates - HEPA

\*P2 protection when worn with the 8000 half mask.

## 8000 Particulate Filters

- Use 8010A P2 Filter together with the 8020 Pre-filter Retainer as a pre-filter with any Gas/Vapour cartridge or as a stand-alone filter with the 8900 Filter/Disk Holder.
- Use the 8830A P2/P3\* Filter as a stand-alone filter with the 8900 Filter/Disk Holder or piggyback with a cartridge with the 8920 Piggyback Adapter.

8010A P2 Filter

8750A P2 with Nuisance Ozone/OV (only for use as standalone with 8900)

8830A P2/P3\* Filter

\*P2 protection when worn with the 8000 half mask.

# Powered Air Purifying Respirators

**Providing clean breathing air is essential when working in areas where hazardous contaminants are present. 3M offers an extensive and flexible range of industrial powered and supplied air respirators, developed especially for the toughest environments. These respiratory protective systems offer comfortable protection against multiple hazards and their ease-of-use enables improved productivity in the workplace. 3M is available to support the user in the correct selection, training and proper use of these products.**

Powered Air Purifying respirators (PAPRs); include a blower that draws contaminated air through filter/s to remove contaminants, supplying purified air to the user wearing either an open head top (loose fitting hood) or tight-fitting face mask. Like full and half face masks, PAPRs are also available in ready-packs to simplify the respiratory selection process.

### 3M offers a range of ready-to-go PAPR kits:

- Full face masks for asbestos and dust applications
- Half and full hood head tops ideal for chemical and pharmaceutical industry
- Helmets and face shields ideal for welding applications.

### The benefits of a PAPR are:

- Protection factors up to 100+, based on the headtop and filter/cartridge being used
- Good option if using for long periods by reducing the weight of a filter carried on a face mask
- Helps prevent user fatigue with air moving around the head and face cooling the wearer
- Available with a wide range of open and closed head tops (hoods & masks).

These features make PAPRs ideal for industries such as; asbestos removal, pharmaceutical manufacture, smelters, waste control, land remediation, welding and agriculture. With any negative pressure or PAPR RPE the selection and use of the correct filter for the contaminant/hazard is crucial. Filters are typically designed to handle particulates, gas/vapour or a combination of both particulate and gas.

The life of a gas cartridge is dependent upon the temperature, humidity, concentration and type of contaminant, the class of filter and the rate of breathing of the wearer. Filters should be replaced on a regular basis in accordance with an established

filter replacement schedule identified in the initial risk assessment. AS/NZS 1716: 2012 recommends discarding your filter when any one of the following conditions exists:

- The particulate filter becomes difficult to breathe through
- Breakthrough gas occurs; indicated by smell or taste or according to the filter replacement schedule identified during the risk assessment
- 6 months has passed since sealed gas/vapour filter package has been opened
- The expiry date on the filter has passed.

In some instances, depending on the type of chemical hazard, filters must be changed out after each shift.

If filters are to be re-used they should be stored in a sealed plastic bag or box.

### Filter classifications:

#### Particulate Filters are classified as P1, P2 or P3:

- P1 filters handle mechanically generated particles
- P2 filters handle mechanical & thermally generated particles
- P3 filters handle mechanical & thermally generated particles

#### Gas filters are rated Class 1, Class 2 or Class 3 according to their capacity to capture and hold certain gas/vapours

The classification for gas & vapour filters is based on the groups of gases they are designed to be most effective against. Filters have colour-coded labels for easy identification of the different groups.

# Experience maximum flexibility as you move from one job to the next.

## New levels of comfort and simplicity

3M offers an extensive and flexible range of powered and supplied air respirators developed for a wide range of environments, applications and hazards.

These respiratory protective systems offer comfortable, integrated protection against multiple hazards providing respiratory, head, face, eye and hearing protection. Their ease of use can improve productivity in the workplace.

- 1 All 3M™ Versaflo™ Brand Products are light-weight, compact and well-balanced
- 2 Two-position adjustable airflow feature distributes air where the user wants
- 3 Multiple size adjustment options allow for a comfortable fit
- 4 Equipped with automatic flow control, low battery alarm, and low flow alarm
- 5 QRS (Quick Release Swivel) breathing tubes allow fast and easy connection
- 6 Provides excellent peripheral and downward vision
- 7 Easily removable parts allow simple cleaning, maintenance and replacement
- 8 The air inlet draws air from the bottom of the unit, allowing the wearer to sit without blocking the airflow intake

## Powered Air

## Supplied Air

## Which air system should I choose?

### A powered air system?

- Incorporates a battery powered motorised fan to draw air through a filter
- Cannot be used to protect against substances with poor warning properties (taste/smell)
- Must not be used in conditions that are Immediately Dangerous to Life or Health (IDLH)
- Suitable for use over long shifts - reduced breathing resistance
- Can offer integrated head, eye and face protection

### A supplied air system?

- Air is supplied from a compressor (compressed air must be of breathable quality)
- Can be used to protect against substances with poor warning properties (taste/smell)
- Must not be used in conditions that are Immediately Dangerous to Life or Health (IDLH)
- Suitable for use over long shifts - reduced breathing resistance
- Can offer integrated head, eye and face protection

Supplied Air System Stethoscope

The modular respirator system is a comprehensive approach to worker protection systems based on comfortable-to-wear modules. All modular headtops, air delivery units and breathing tubes are compatible with one another. Users can mix and match parts as they move from one environment to another, or from one application to the next. It is the ultimate in flexibility for handling changing user environments.

The individual respirator systems can be used in a variety of workplace applications. They include powered air respirators with integrated head, eye, face and respiratory protection and supplied air regulators with half and full face masks.

# 3M™ Versaflo™ TR-800 Powered Air Purifying

- The Versaflo TR-800 features a PAPR blower UL-certified with an intrinsically safe (IS) rating of Division 1: IS Class I, II, III; Division 1 (includes Division 2) Groups C, D, E, F, G; T4, under the most current standard (UL 60079, 6th Edition, 2013).
- LED indicators on the turbo indicate battery charge level, particulate filter loading status and airflow setting
- Low flow and low battery alarms - Visual, Audible and Vibratory
- Vibratory, audible and visual alarms assure you can hear, see and feel when your PAPR has low-charge or low-flow
- Compatible with multiple configurations of headtops, breathing tubes, batteries, filters, cartridges and more
- Ergonomically designed to fit close to the body and allow for greater movement in tight work spaces
- Multi-speed blower functions at altitudes up to 4,880 metres. Battery offers long run time and charges quickly, achieving 90% charge in approximately 3.5 hours.
- Multiple airflow rates put you in control of your comfort.
- Battery comes with built in charge level indicator, a mechanical attachment of battery to help prevent battery removal during use. Approximately 750 full charge/discharge cycles.
- Intuitive, coloured touchpoints plus visual and audible lowflow indicators help make the TR-800 easy to use.

## 3M™ Versaflo™ Powered Air Purifying Respirators TR-300+

- The 3M™ Versaflo™ PAPR TR-300 is significantly lighter and thinner than past generations of 3M™ Belt-Mounted PAPR units. It also keeps its light weight close to the user's back, reducing the leverage effect that can cause PAPRs to feel heavier. The slim profile is designed for use in tight spaces, and its smooth, contoured outer surfaces are less prone to snagging on nearby objects.
- Two user selectable flow rates 185 & 205 l/min
- Controlled airflow delivers steady flow as battery discharges or filters loads with particulates
- Display shows battery charge status, selected airflow and particulate filter loading status during use
- Audible and LED alarm signals low battery charge or low airflow
- Three filter options available: P3 Particle, P3 Particle plus nuisance level organic vapours\* & P3 Particulate only nuisance acid gas \* and offers protection against hydrogen fluoride up to 10 x Occupational Exposure Limit
- Lithium ion battery with LED to indicate charge status
- Three belt options (standard, easy-clean and leather) for a range of applications
- Suitable for use in decontamination shower (IP 53)

- Nuisance level refers to concentrations below the Occupational Exposure Limit
- Compliant with AS/NZS 1716:2012

## Versaflo™ M-200 Series High Impact Faceshield

The Versaflo M-200 Series High Impact Faceshield provides integrated protection from specific respiratory, eye and face hazards with optional hearing protection. Two options for different applications:

- M-206 features a general purpose faceseal for dusts, spraying and chemical processing.
- M-207 features a flame resistant faceseal for applications with hot particles
- M-200 offers a full headtop protection, eliminating the need of head inserts being needed.
- Compatible with TR-300+, TR-600, TR-800, Jupiter units and supplied air regulators V-100, V-200, V-300, V-500
- M-200 has replaced M-100 Series Headtop

## Versaflo™ M-300 Series High Impact Helmet

The Versaflo M-300 Series High Impact Helmet provides integrated protection from specific respiratory, head, eye and face hazards with optional hearing protection. Two options for different applications:

- M-306 features a general purpose faceseal for dusts, sprays and chemical processing.
- M-307 features a flame resistant faceseal for applications where hot particles may be present.
- Compatible with TR-300+, TR-600, TR-800, Jupiter units and supplied air regulators V-100, V-200, V-300, V-500

Model	Description
RP 3M M-306	Versaflo Helmet with coated visor and comfort faceseal
RP 3M M-306CAP	M-306 Headtop only with Cap Lamp Mount Bracket
RP 3M M-307	Versaflo Helmet with coated visor and flame resistant faceseal
RP 3M M-316	Airflow Deflector - 1 per case
RP 3M M-350	Head Suspension - 1 per case

# power assisted filter protection

**Sundström Safety's powered fan units are designed to give the user the maximum level of protection, comfort, simplicity and cost-effectiveness.**

## RP SEA 500

FAN UNIT FOR particles and gas  
art no H06-0109  
art no H06-0109 HD

The SR 500 is a fan unit designed to give protection against harmful particles as well as gases and vapours. It is equipped with two particle filters SR 510 P3 R or a threaded filter SR 710 P3 R and two pre-filters SR 221 for protection against particles.  
For protection against gas exposure: two gas filters SR 518 A2, or two gas filters SR 515 ABE1, or two SR 597 A1B2E2K1 and particle filters SR 510 P3 R. NB: Gas filters must be used in combination with particle filters at all times.

- Optical, acoustic and vibration alarms.
- Standard battery SR 501, 14.8 V, 2.2 Ah, lithium-ion with 30 min. charging time to reach 80% and 1.5 hours to reach 100%
- Heavy duty battery SR 502, 14.8 V, 3.6 Ah, lithium-ion with 45 min. charging time to reach 80% and 2 hours to reach 100%
- The display indicates the battery capacity when the fan starts
- Operating time up to 13 hours depending on selection of filter, flow rate and battery type

## RP SEA 500EX

Easily operated battery powered fan with particle- or combination filters  
art no H06-2009

The SR 500 EX fan is explosion-proof and specially adapted for use in an explosive atmosphere. The SR 500 EX is included together with filters and head-tops in Sundström fan-assisted respiratory protective devices

- The SR 500 EX can be used as an alternative to filter protections in all situations in which the latter are recommended. This applies particularly to situations in which the work is intensive, hot or of long-duration. The fan is equipped with filters and the filtered air is supplied through a breathing hose to the head-top. The latter is then pressurized, which prevents the surrounding pollutants from being admitted.
- Wide range of face pieces such as hoods, helmets and visors, all in TH3. They can also be connected to the SR 200 full mask in TM3.

**RP SEA 700**  
FAN UNIT FOR particles  
art no H06-7009

The SR 700 is a compact lightweight fan designed especially to provide protection against harmful particles where optimal protection properties are required. It is equipped with two particle filters, SR 510 P3 R, or threaded filter SR 710 P3 R, as well as pre-filter SR 221. With acoustic and optical alarms.

- Battery SR 701, 14.8V, 2.2 Ah, lithium-ion with a charging time of approx. 2 hours
- Approx. 8 hours operating time at a flow rate of 175 l/min., and approx. 5 hours at 225 l/min

**RP SEA 500 / RP SEA 570**  
FAN UNIT FOR particles AND GAS  
WITH Face shield  
art no H06-6609

**RP SEA 700 / RP SEA 200**  
FAN UNIT FOR particles  
WITH FULL FACE MASK  
art no H06-7109

## Face shields, hoods and helmets, all in TH3

Choose a suitable face piece

All face pieces are supplied with a breathing hose for connection to fan SR 700 or SR 500, or to compressed air attachment SR 507.

**RP SEA SR 520 & RP SEA SR 530**  
**HOODS**  
RP SEA SR520 S/M - art no H06-0312  
RP SEA SR520 M/L - art no H06-0212  
RP SEA SR530 - art no H06-0412

- SR 520 covers the face and crown of the head and is available in two sizes, S/M and M/L.  
SR 530 covers not only the face and crown of the head but also the neck, throat and shoulders. One size. SR 530 has an easily adjustable neck seal that assures a very high level of protection, also for persons with a beard.
- Low weight
  - Ready mounted Velcro strip for simple adjustment to head size
  - Visor made of chemicals-resistant cellulose acetate (CA)
  - PVC-coated polyester in the hood
  - Exhalation valve that reduces the build-up of carbon dioxide inside the hood during heavy work
  - Can be equipped with peel-offs or a protective hood against strong splash-backs and similar hazards

**RP SEA 561 & RP SEA 562**  
**Hoods**  
art no H06-5012  
art no H06-5112

- SR 561 protects the whole head and shoulders. Adjustable soft neck seal made of cotton.  
SR 562 protects the face and crown of the head. Comfortable face seal made of polyamide/lycra.
- Low weight
  - Separate head harness allows replacement of the hood alone
  - Visor in chemicals-resistant PETG.
  - The hood is made of Tyvek® material offering effective protection against a wide range of chemicals
  - Easily adjustable head harness

**RP SEA 570**  
Face shield  
art no H06-6512

The SR 570 face shield is a modern, innovative product, designed and developed based on the needs and requirements from the market.

- The SR 570 is a robust shield with a flip-up visor, and gives the user comfortable and safe respiratory and eye protection.
- The face shield is fitted with an attachment for hearing protectors.
- A wide range of accessories enable the user to customise the shield for their work situation. The shield is manufactured in a material that permits use in tough environments.
- The SR 570 shield can be used with either our SR 500 or SR 700 powered fan unit. It can also be used with the compressed air attachment SR 507.

**RP SEA 540**  
FACE SHIELD  
art no H06-6012

EX-class, gas: II 2 G Ex ib IIA T3 Gb  
EX-class, dust: II 2 D Ex ib IIIC T195°C Db

- The SR 540 EX face shield together with the SR 500 EX fan has been approved for use in an explosive atmosphere. The breathing hose of the face shield is connected to the fan equipped with filters. The pressure generated inside the face shield prevents particles and other impurities from being admitted.
- The SR 540 EX face shield may also be used together with compressed air attachment SR 507 but in this case only in environments which are not potentially explosive. This combination forms a breathing apparatus designed for continuous air flow, for connection to a compressed air supply. See separate product leaflet SR 507.
- The equipment can be used as an alternative to filter protections in all situations in which the latter are recommended. This applies particularly to situations in which the work is intensive, hot or of long duration.

**RP SEA 591**  
WELDING SHIELD  
art no H06-4312

- SR 591 welding shield is design for use either by itself or in combination with a respiratory protection system. The welding shield is designed for easy use and operation. Adjustable head harness for best comfort.
- The SR 591 can be equipped with different types of welding filters. To get the best and appropriate respiratory protection you can choose to use it with either SR 900 half mask with remote filter holder SR 905 or with our powered fan unit SR 500 or SR 700 in the highest protection level (TM3). You can also use SR 900 with our SR 507 compressed air attachment in class 3A/3B.

**RP SEA 592**  
welding shield with air channel  
art no H06-4412

- SR 592 welding shield is design for use with a respiratory protection system. The welding shield is designed for easy use and operation. Easy and adjustable head harness for best comfort. The SR 592 can be equipped with different types of welding filters.
- To get the best and appropriate respiratory protection you can choose to use it with our powered fan unit SR 500 or SR 700 in the highest protection level (TH3).

**RP SEA 588-1 / RP SEA 580**  
Safety helmet with  
2/3 visor EN 3  
art no H06-8610

- Safety helmet SR 580 with visor EN 3. The visor protects against light emissions arising during welding and cutting operations and have a very good optical clarity.

**RP SEA 587 / RP SEA 580**  
Safety helmet with  
goldvisor EN5  
art no H06-8510

- Safety helmet SR 580 with a gold plated shield. Suitable when work is performed in extreme heat as the shield significantly reduces radiant heat.

**RP SEA 588-2 / RP SEA 580**  
Safety helmet with  
2/3 visor EN 5  
art no H06-8710

- Safety helmet SR 580 with visor EN 5. The visor protects against light emissions arising during welding and cutting operations and have a very good optical clarity.

**RP SEA 580**  
Safety helmet with visor art no H06-8009

- Complete protection of airways, head and face
- If required, may be complemented with most ear protectors for helmet mounting
- Easily raised visor made of polycarbonate
- Exhalation valve minimises the concentration of carbon dioxide inside the protective gear during heavy work
- Easily replaceable visor and face seal

# CleanSpace<sup>®</sup>

R E S P I R A T O R S

REVOLUTIONARY  
RESPIRATORY  
PROTECTION

## Work Effortlessly & Comfortably Over long periods with P3/TM3 protection

**SAFE**  
Fully certified positive pressure respiratory with HEPA filtration (99.95% efficiency) ensuring maximum protection in the work place. Up to 8 hours run time. TSI Portacount testing adaptors available.

**WEARABLE**  
Easy to wear; Effortless and comfortable. No hoses or heavy belt mounted battery packs.

Award winning lightweight design (less than 500g) and lithium polymer battery delivers clean fresh air for a full shift.

**SMART**  
Tough, reliable, cost effective; no servicing or maintenance and easy to clean; A simple one-button system; CleanSpace compact design provides compatibility with other safety equipment.

## CLEANSPACE2™

1) CleanSpace Technology accepts no liability for incorrect choice of respiratory protective equipment. This chart is only an outline. It is designed to assist in the selection of the most appropriate filter for particular applications. It should not be used as the only means of selecting respirator/filter combination. This guide does not release the user from the obligation to comply with national application regulations and laws and is not a substitute for adhering to and understanding the product instruction manuals. For selection of the correct respiratory protection equipment for your application, consult a safety specialist. **IMPORTANT NOTE:** Filtering respiratory protection devices should not be used in poorly ventilated areas or confined spaces, such as tanks, small rooms, tunnels or vessels. CleanSpace respirators should not be used in oxygen deficient or oxygen enriched atmospheres or flammable or explosive environments.

# 3M™ Speedglas™ Powered Air Respiratory Welding Helmets

## 3M™ Speedglas™ G5-01VC with Heavy-Duty Adflo™ PAPR

HP SG 617830 - 3M™ Speedglas™ G5-01VC Welding Helmet with Heavy-Duty Adflo™ PAPR

- Features & Benefits
- True-View optics and Variable Colour tones in the dark state
- Largest ever Speedglas welding lens (73 x 109mm)
- Extra dark shade 14 for heavy-duty welding (3/5,8-14)
- Control the airflow in your helmet with climate control
- Configurable extra coverage options
- Removable flip-up visor reduces weight by 35%
- Bluetooth connectivity
- Optional task light specifically designed for welding
- Heavy-duty Adflo PAPR for 12 hours' respiratory protection

## 3M™ Speedglas™ 9100XXi MP Air with Adflo™ PAPR

HP SG 577726 - 3M™ Speedglas™ 9100XXi MP Air Welding & Safety Helmet with Adflo™ PAPR

HP SG 577726HD - 3M™ Speedglas™ 9100XXi MP Air Welding & Safety Helmet with Heavy-Duty Adflo™ PAPR

- Features & Benefits
- Integrated safety helmet with flip-up grinding visor
- True-View optics for improved colour and contrast
- Extra-large 73 x 107mm viewing area
- Peripheral SideWindows for enhanced vision
- Award winning respiratory protection (RMPF = 50)
- Powered air flow of 170/200 litres per minute
- Available with 8 hour standard battery (part no. 577726) or 12 hour heavy-duty battery (part no. 577726HD)

## 3M™ Speedglas™ 9100XXi FX Air with Adflo™ PAPR

HP SG 547726 - 3M™ Speedglas™ 9100XXi FX Air Welding Helmet with Adflo™ PAPR

HP SG 547726HD - 3M™ Speedglas™ 9100XXi FX Air Welding Helmet with Heavy-Duty Adflo™ PAPR

- Features & Benefits
- Flip-up mechanism reveals a clear grinding visor
  - True-View optics for improved colour and contrast
  - Extra-large 73 x 107mm viewing area
  - Peripheral SideWindows for enhanced vision
  - Award winning respiratory protection (RMPF = 50)
  - Powered air flow of 170/200 litres per minute
  - Available with 8 hour standard battery (part no. 547726) or 12 hour heavy-duty battery (part no. 547726HD)

**3M™ Speedglas™  
9100XXi Air with Adflo™ PAPER**

HP SG 507726 - 3M™ Speedglas™ 9100XXi Air Welding Helmet with Adflo™ PAPER

HP SG 507726HD - 3M™ Speedglas™ 9100XXi Air Welding Helmet with Heavy-Duty Adflo™ PAPER

**Features & Benefits**

- External button for grind and memory modes
- True-View optics for improved colour and contrast
- Extra-large 73 x 107mm viewing area
- Peripheral SideWindows for enhanced vision
- Award winning respiratory protection (RMPF = 50)
- Powered air flow of 170/200 litres per minute
- Available with 8 hour standard battery (part no. 507726) or 12 hour heavy-duty battery (part no. 507726HD)

# Airline & Escape

Ideal for environments where ambient oxygen cannot be guaranteed, airline breathing apparatus combines the highest degree of respiratory protection with long duration use.

## Air Supplied Respirators.

There are commonly three types of air-supplied breathing apparatus which are each suited to different tasks;

- Airline breathing apparatus
- Escape breathing apparatus
- Self Contained Breathing Apparatus (SCBA)

**Airline breathing apparatus** are available as either constant flow airline or positive pressure demand airline system.

Constant flow airline apparatus is typically a combination of an airline face mask with a short air hose and also a filter. The short air hose connects to a control valve on a waist belt. The filter is used when entering and exiting the contaminated job. When a worker enters the contaminated work site they would plug the control valve on their waist belt to an air hose, which is connected to either an airline trolley with cylinders or other air supply.

Positive pressure airline apparatus includes a positive pressure full face mask and pneumatics with demand valve and a short hose on a bandolier style harness (optional

hip mounted escape cylinder is available). The pneumatics connects to the breathing air hose, which is connected to either an airline trolley with cylinders or other air supply. Positive pressure airline systems are particularly suited to confined space entry and are popular in the oil and gas industry for maintenance when entering into tanks and pipework.

Air cylinder trolley's are available with up to 4 cylinders supplying air for up to 4 employees. This system can offer infinite working duration as one cylinder can be changed whilst taking air from another cylinder.

**Escape Breathing Apparatus** also known as Emergency Life Support Apparatus are designed only for escape from hazardous conditions as they normally only include very short-duration compact air cylinders.

Scott offer the ELSA (Emergency Life Support Apparatus) with 15 minute duration cylinders. These products should **NOT** be used for normal working activities, entry to hazardous areas or rescue work.

### Constant Flow Airline range

This range is designed to operate from an industrial compressed air system but other air sources like an airline trolley or cylinders are also suitable. Air is delivered to a facepiece via a breathing hose. Air flow is controlled by a

belt mounted regulator or from the filtering unit depending on the facepiece. The flow rate is easily checked by using the flowmeter. A compressed air supply hose connects the wearer to a source of compressed air.

## 3M™ Versaflo™ Supplied Air Respirator V-500E & Kit

Versaflo™ Supplied Air Regulator Kit, V-500E includes air regulator with locking adjustment knob and integrated low air flow warning whistle, silencer, replacement carbon filter, auxillary port and user instructions. Suits the range of M Series and S Series Versaflo headtops.

Model #	Description
RP 3M V-500E	Supplied Air Regulator (Excludes breathing tube).
RP 3M 902-03-84	Versaflo™ Spray Painter Kit, ALVM-206E c/w V-500 supplied air regulator and M-206 headtop

SA-2500 & SA-1007

Model #	Description
RP 3M 68SA2	Full Facepiece System - Medium Kit c/w 6000 series full face mask, SA-2500 stethoscope breathing tube, SA-1007 valve regulator & belt and 901-00-73 CEJN Male tail
RP 3M 69SA2	Full Facepiece System - Large Kit c/w 6000 series full face mask, SA-2500 stethoscope breathing tube, SA-1007 valve regulator & belt and 901-00-73 CEJN Male tail
RP 3M SA-2500	Stethoscope Breathing Tube (1)
RP 3M 901-00-73	CEJN Male Tail with 1/4" NPTM (2)
RP 3M SA-1007	Regulating Valve Belt & Clip

**V-200 Heating Airline Belt System**

Heating Airline Kit includes Heating Vortex kit, V-200, muffler, hose connector, waist belt and user instructions. Suits the range of M Series and S Series Versaflow headtops.

Model #	Description
RP 3M 902-02-85	Heating Airline Kit with Breathing Tube

### 3M™ Scott Flite COV Airline

#### Breathing Apparatus

- Easy to don bandolier harness with padded shoulder strap
- Optional 10 or 15 minute air supply for emergency escape from hazard situations, must be worn in IDLH
- Can be used with Scott range of positive pressure masks (sold separately)
- If primary air supply source is interrupted a switchover to emergency cylinder air supply is immediately activated by the automatic change over valve to facilitate safe egress
- Warning whistle informs user switch has been made to cylinder air

Model #	Description
RP SCO 2031077	Flite COV Airline Breathing Apparatus DV CEN
RP SCO 013190	Promask PP Left Quick Fit Full Face Mask

### 3M™ Scott RAS Asbestos Positive Pressure Airline Breathing Apparatus

Easy to don bandolier with wipe clean harness  
Can be used with Promask RAS and Vision 3 RAS range of positive pressure masks Facemask fitted filter for site entry and egress  
In-line particulate filter

Model #	Description
RP SCO 2024492	RAS Asbestos Airline Kit Vision 3 P3 Filter
RP SCO 2001746	Vision 3 LQF RAS M/L DIN Full Face Mask
RP SCO 2025005	RAS Asbestos Spare Harness Only
RP SCO 5013166	Promask PP LQF RAS M/L DIN Full Face Mask HC STD
RP SCO 2023447	RAS Asbestos (Less facemask)
RP SCO 2025005	Spare harness

### 3M™ Scott Modulair Airline Trolley

- Compact, easy to use airline trolley system
- Capacity to hold 2 cylinders for 2 man operation or to hold 4 cylinders for 4 man operation
- Suitable for ships, councils, sewage treatment, refineries, mining, confined space entry and extended duration use

Model #	Description
RP SCO 1051844	Modulair Trolley With Hose Reel 2P 2Cyl
RP SCO 1051880	Modulair Trolley With Hose Reel 4P 4Cyl
RP SCO 1051945	Modulair 2 Person 2 Cylinder
RP SCO 1051902	Modulair Hose Reel Only
RP SCO 1118245T	Cylinder 6.8L 300 Bar Carbon c/w T valve
RP SCO 1127413T	Cylinder 9L 300 Bar Carbon c/w T valve
RP SCO 1051467	20 Mtr Black PVC Hose With CEN Couplings

### 3M™ Scott CEN-PAQ Short Duration SCBA

- Proven, effective pneumatic system with first breath activation
- Designed to fit a wide range of body sizes
- Hook and loop fastening waistcoat
- Hi Vis PVC material or anti-static material options available
- 30 minute duration
- Used with Scott Promask PP or Vision 3 Full Face Respirators
- Mask and Cylinders purchased separately

Model #	Description
RP SCO 1044960	Cen-Paq Hi Vis Orange Vest 30 Min
RP SCO 013190	Promask PP Left Quick Fit Full Face Mask
RP SCO 1071671	Vision 3 PP Left Quick Fit Full Face Mask

RP SCO 2006634	Cylinder 3L 300 Bar Steel

## SR 307

Compressed air attachment  
art no H03-1412

The SR 307 compressed air attachment is designed for connection to Sundström half masks and full face masks. This combination forms a breathing apparatus designed for continuous air flow, for connection to a compressed air supply. The SR 307 is an accessory that enables a given facepiece to be used as either a filtering device or a protective device supplied with compressed air. The compressed air attachment is especially intended for applications involving heavy and sustained work in environments in which the pollutants have poor warning properties or are particularly toxic.

## SR 507

Compressed air attachment  
art no H03-0612

The SR 507 compressed air attachment is designed for connection to Sundström hoods SR 520/ SR 530/ SR 561/ SR 562, visors SR 570/SR 540 EX, half mask SR 900, helmet with visor SR 580 and welding shield/helmet with visor SR 584/ SR 580. This combination forms a breathing apparatus designed for continuous air flow, for connection to a compressed air supply. The SR 507 is an accessory that enables a given face piece to be used as either a protective device supplied with compressed air or a powered air purifying respirator (PAPR). The compressed air attachment is especially intended for applications involving heavy and sustained work in environments in which the pollutants have poor warning properties or are particularly toxic.

## SR 200 AIRLINE

Airline PC art no H03-1012  
Airline Glass art no H03-1212

SR 200 airline with filter backup. This consists of an SR 200 full mask with a hose connection mounted in the front part of the mask where the air from the regulating valve enters. A suitable filter/filter combination in the mask offers protection in the event of loss of pressure and when moving to and from the workplace. Complete with regulating valve and belt.

- In restricted spaces, the equipment can be used with a plugged front hole
- Specially developed for environments requiring a high protection factor
- The air flow is controlled by the regulating valve in the belt to assure a flow rate of between 150 and 320 l/min
- The inlet pressure to the regulating valve shall be 5 - 7 bar
- A flow meter and warning whistle for temporary and continuous monitoring of the air flow are included
- The breathing hose can be detached from both the mask and regulating valve, allowing the face piece to be used as a regular full mask with a filter, or connected to one of Sundström Safety's fans SR 500 or SR 700

## SR 63

Compressed Air Hood  
art no H03-0312

Compressed air hood SR 63 consists of a hood in durable fabric reinforce PVC with a large visor in shatterproof polycarbonate with an easily adjustable harness. Complete with regulating valve and belt.

- Can be equipped with a protective film
- The air flow is controlled by the regulating valve in the belt to assure a flow rate of between 150 and 240 l/min
- The inlet pressure to the regulating valve shall be 4 - 7 bar
- A flow meter and warning whistle for temporary and continuous control of the air flow are included

## SR 99-1

Compressed air filter  
art no H03-2810

The SR 99-1 compressed air filter is used for producing clean breathing air from ordinary compressed air. The unit consists of a regulator, pre-collector and main filter, all of which are mounted in an enclosing steel sheet stand.

The unit can be placed on the floor or mounted on a wall.

The pre-separator has automatic drainage, separates coarser particles, water and oil.

## Practical accessories

SR 292 Filter cartridge  
art no R03-2001

Y coupling  
art no R03-2127

The SR 292 main filter consists of a carbon filter part (500g), surrounded by two P3 particulate filters. The air is cleaned to remove any remaining particles/gases/vapours/odours. A Y coupling that increases the number of outlets is available as accessory.

# Emergency Escape Respiratory Devices

Devices of this nature are designed to allow escape from an environment where the atmosphere has become un-breathable due to contamination or a dangerous oxygen level. These units will either have a limited supply of breathable air (compressed air or chemical oxygen) or will effectively filter the available air for a specific time. They need to be portable, lightweight and sufficiently compact.

## Compressed air supply escape respirators

Will consist of a rechargeable cylinder designed to provide an air supply of between 8 to 15 minutes, connecting hose and a hood with an inner mask that encapsulates the head to keep out any hazardous gasses. Typical applications are in the offshore industry and manufacturing.

## Oxygen self rescuers

Use a chemical reaction to enrich exhaled air with oxygen as part of a closed circuit breathing system. These consist of a device carried with the user, usually housed in hard case, which can be opened and activated quickly as the situation arises. They are consumable and represent a once off use that can provide between 20 and 60 minutes of air. This type of protection is most often used in the underground mining industry, they have a shelf life and should be integrity checked at regular intervals.

## Escape respirators

Allow the user to breathe the available air, operate by filtering out unwanted contaminants such as organic vapours, inorganic gasses and particulates. They are usually very compact, easy to use and have a service life determined by the effectiveness of the filter itself. They always rely on an adequate level of oxygen being present in the ambient atmosphere and should not be used when this is in doubt. As such, they will most often be used in an open air environment rather than a confined space eg refineries, offshore and manufacturing plants.

## MSA Smoke Hood

- RP MSA 1440005 - Smoke Hood
- RP MSA 1446021 - Training Hood w/o filter
- RP MSA 1446031 - Filter Holder
- RP MSA 1446030 - Filter Pads (Box of 100)

The Smoke Hood is an emergency escape respirator, designed to the exacting requirements of the North Sea oil production industry, for self rescue from fire incidents where smoke, carbon monoxide and other toxic gases may be present.

The hood provides protection against radiant heat while the neck seal provides additional protection against smoke rising inside the hood. A self-adjusting, one size fits all, head harness makes for quick and easy donning.

- Elastic neck seal.
- Simple and quick handling.
- Safe protection of breathing, eyes and head.
- Large performance filter.
- High performance filter.
- Low breathing resistance.
- 15 minutes.

## MSA Miniscape Escape Respirator

RP MSA 10038560

The Miniscape respirator is a single use escape device with a 5 minute service time. It is equipped with mouthpiece and nose clip. Small and handy, the Miniscape fits into your pocket and can also be belt mounted.

The Miniscape can be donned very quickly and is immediately operational. It is housed in a rugged, translucent carrying case, to protect it against shocks and ageing. The Miniscape protects against numerous toxic gases including organic vapours and inorganic gases eg. solvents, hydrogen cyanide, ammonia, sulphur dioxide.

Approval is ABEK-5 according to DIN 58647-T7.

**Dräger PARAT® Filtering Escape hood**

The Dräger PARAT® filtering escape devices with hood, was developed with the focus on the fastest possible escape. Optimized operation and wearing comfort, a robust housing and a high capacity filter ensure protection from toxic industrial gases, vapours and particles (depending on model) for at least 15 minutes.

- Visible hood and automatically adjusting internal head harness, gives eye protection along with respiratory protection.
- Automatic activation when the hood is removed for donning. This enables donning within seconds.
- The high-performance filter reliably protects against a wide range of toxic fire-related gases, vapours and particles for a minimum 15 mins.
- PARAT 4700 - For industrial gas escape with ABEK P3 filter
- PARAT 5500 - For fire escape with CO P3 filter
- PARAT 7500 - For Industrial Fire escape - with ABEK CO P3 filter
- 16 year maintenance free product life with one filter change in 8 years.

RP SEA 76 M/L  
RP SEA 76 S/M**

Emergency escape hoods are vacuum sealed and often stored in handy packs in an easily accessible location for rapid use. One size fits all, and the hood is easily fitted in a single action without practice or training. The respirator and hood provides short-term protection against a variety of substances during evacuation of a building or other emergency procedures.

- Made from flame and chemicals resistant material.
- Incorporates a silicone half mask with an ABEK1 cartridge (organic gas, inorganic gas, acid gas, ammonia) and a high-efficiency particle filter for smoke and fume.
- Extremely easy to put on, and does not require any adjustment.
- Supplied in a vacuum-sealed container with a storage life of 15 years (filters 7.5 years).
- Can easily be fitted with optional SmallTalk microphone and loudspeaker for effective voice communication for use by team leaders, floor supervisors etc.
- Supplied in a handy nylon contingency bag.

**SR77-2 M Chemical/Smoke Escape Hood  
RP SEA 77 M/L  
RP SEA 77 S/M**

Emergency escape hoods are vacuum sealed and often stored in handy packs in an easily accessible location for rapid use. One size fits all, and the hood is easily fitted in a single action without practice or training. The respirator and hood provides short-term protection against a variety of substances during evacuation of a building or other emergency procedures.

- Made from flame and chemicals resistant material.
- Incorporates a silicone half mask with a gas and particle filter that provides protection from smoke, fume, carbon monoxide and other toxic gases that may be generated in a fire.
- Also provides protection against chemical vapours and warfare agents such as nerve gas, sarin, anthrax, smallpox, tear gas, mustard gas and more.
- Extremely easy to put on, and does not require any adjustment Supplied in a vacuum-sealed container with a storage life of 15 years (filters 7.5 years).
- Can easily be fitted with optional SmallTalk microphone and loudspeaker for effective voice communication by team leaders, floor supervisors etc.
- Supplied in a handy nylon contingency bag.

**InterS Piro Escape Set  
RP SEA SPIR-ESC-10  
EMERGENCY ESCAPE BREATHING DEVICE (EEBD)**

- Unique patented automatic ambient air valve
- Eliminates the risk of suffocation
- Unique patented air supply system in the hood Maximized duration, minimized dead space
- Two-layered hood, outer and inner
- Positions the inner mask correctly
- Very flexible neck seal Easy to don and comfortable to wear
- Quiet air delivery system Allows voice communication
- Fail safe quick start mechanism
- Guarantees automatic air activation
- Compressed breathing air technology
- Unit can be re-used
- 8 Quick fill system
- Quick and easy recharging of cylinders

**MSA S-CAP-AIR**
**RP MSA 10017668T - Charged.**

The S-Cap-Air is a compressed air, constant flow, escape breathing apparatus designed to aid escape from hazardous areas in which toxic substances or oxygen deficiency may occur. It is very easy to operate - simply open the unit, put on the hood and make your escape. 15 minutes duration. EN 1146 approved.

**MSA BD Mini Escape Set**
**RP MSA 762082 - BD Mini**
**AutoMaXX DV Ultra Elite Mask**
**RP MSA 228195 - Fully wrapped**
**carbon fibre cylinder and valve 2 litre - 300 bar 15 minute duration.**

The MSA Escape compressed air breathing apparatus BD mini is especially suited for short-duration work in confined spaces. Its small size and the variable design permit various carrying modes. With a connection for compressed airline breathing apparatus [available as accessory] the BD mini can be connected to a factory airline system or a cylinder cascade.

**Scott Safety ELSA Emergency Escape Apparatus**
**RP SCO 2009419 - Elsa 15 Minute**
**Escape set with cylinder.**

The Scott Safety ELSA constant flow escape breathing apparatus provides a constant supply of air for rapid escape from hazardous industrial and marine environments. The ELSA is simple and quick to operate, reliable and robust in use, ensuring maximum protection in an escape situation. The ELSA is available in durations of 15 minutes in high visibility PVC or black anti-static polyurethane materials.

- Automatically activated upon opening bag.
- Hood Cuboid design for comfort, vision and fit.
- Quick and Easy Donning.
- HiVis durable PVC coated Polyurethane bag.
- Hood design enables it to be worn by those with beards or glasses.
- Available in 10 or 15 minute escape sets.
- Certified to AS/NZS 1716:2012 / EN1146 with EC/686/86.
- Lloyd's Marine approved (MED Shipswheel).
- Escape only including gas storage areas, plants utilising toxic chemicals.

**Scott Safety Flite Airline Escape Breathing Apparatus**
**RP SCO 1047792 - Flite Airline**
**Breathing Apparatus.**

The Scott Safety Flite is an open circuit, positive pressure airline breathing apparatus with the option of hip mounted 10 minute compressed air cylinder supply for escape from the most hazardous environments. Ideal for extended working, restricted access areas, working in confined spaces. The Flite's robust design has been proven in some of the most arduous working environments including offshore oil and gas production.

- Easy to don bandolier harness with padded shoulder strap.
- Can be used with Scott Safety Promask PP or Vision 3 positive pressure respirators.
- Optional hip mounted escape cylinder.
- Certified to AS/NZS 1716:2012.
- Where working conditions require supplied air and may require escape from an atmosphere that is Immediately Dangerous to Life or Health ie. confined space entry.

**MSA Lifeguard III**
**RP MSA 764975**

Short duration (8 minutes) escape respirator for use in irrespirable atmospheres. The Lifeguard III consists of an air storage cylinder, pressure reducing constant flow metering valve and flame retardant hood. The easy to fit hood can be used by personnel with facial hair and eyewear and overcomes the problems associated with donning a tight fitting mask.

**MSA Alpha Space Breathing Apparatus**
**RP MSA 765623 - Sizes S, M, L**

- Adjustable cylinder retainer strap for cylinders up to 9 litres
- Harness made of non-flammable Nomex
- Optional extended warning signal line locates warning whistle near user's ear
- Optional MSA Quick-Fill system
- Available in single & twin cylinder configuration
- Cylinders sold separately.

**Dräger Emergency Escape Saver PP**

In emergency situations, conditions can deteriorate rapidly. The air is suddenly filled with smoke or toxic fumes and rapid escape is the only available option. The Dräger Saver PP was designed for use by trained personnel. When opened, the Dräger Saver PP is automatically activated and begins feeding a continuous supply of compressed air. The Saver PP gives the wearer the precious additional time needed to exit the area safely.

The Dräger Saver PP utilizes a simple, fail-safe reducer system with excellent flow characteristics, providing a consistent rate of air flow until the cylinder is completely empty. It can be equipped with cylinders which can hold either a 10 or 15 minute supply of air. The unit can easily be reset following a false alarm. Cylinders can be refilled without the need for special tools.

The new Dräger PP now features an integrated air hose for connection to external mid-pressure air supplies, commonly found in muster stations and in emergency assembly areas. This feature provides the user with potentially lifesaving protection in prolonged escape situations. Hose attachment and detachment are quick, safe and easy.

- The Dräger Saver PP complies with EN402 (2003), Lloyd's Register Certificate of Fire Approval and Lloyd's Register Certificate of Type Approval. It also complies with SOLAS Chapter II-2, the Marine Equipment Directive and the Pressure Equipment Directive. Anti-static versions are also suitable for use in explosive atmospheres (ATEX zone 0).
- Dräger Saver PP - Soft bag versions
- Where working conditions require supplied air and may require escape from an atmosphere that is Immediately Dangerous to Life or Health ie. confined space entry.

**MSA Savox Self Rescuer**  
RP MSA 10023263R - Savox Self Rescuer  
RP MSA 10024538 - SavOx TR Trainer

Very similar to the SSR 30/100 the SavOx offers additional features like safety goggles for eye protection, an automatic starter system and an indicator window. The apparatus is designed to be carried on a belt or shoulder strap, can be donned in seconds and will supply oxygen to the wearer during his escape or while waiting for rescue. Self-contained and low weight it is always ready for use and requires no maintenance. MSA Chemical Oxygen has a maximum life of ten years. EN 401 Duration: 30 minutes [up to 3 hours at rest]

**MSA Self Rescuer Pressure Testing Unit**  
RP MSA 1118845 - Pressure testing unit no insert.  
RP MSA 1118317 - SSR 90 (K 60) self rescuer insert.  
RP MSA 10029195 - SAVOX self rescuer insert.  
RP MSA 1118322 - SSR 30/100 self rescuer insert.

A positive pressure is created in the leak tester. The positive pressure level is determined by the residual volume. The positive pressure remains in a certain range if the container of the tested chemical oxygen apparatus is tight. In case of leakage, the positive pressure drops until the pressure in the test chamber and that in the apparatus have equalised. The larger the leak is, the quicker the pressure drops. This permits also a quantitative estimation of a leakage. The pressure tester needs to be used in conjunction with a product specific insert.

**MSA SSR30/100 Self Rescuer**  
RP MSA 1123701- Oxygen Self Rescuer  
RP MSA 1123711 - SR 30/100, Trainer

The oxygen self-rescuer SSR 30/100 is a small, light and robust respiratory protective device, packed in a stainless steel container, which can be used anywhere, where the ambient atmosphere may be oxygen deficient or contain toxic contaminants. The apparatus is designed to be carried on a belt, donned in seconds and will supply oxygen to the wearer during his escape or while waiting for rescue. Super lightweight (2kg). MSA Chemical Oxygen has a maximum life of ten years. EN 401 Duration: 20 minutes [up to 100 minutes at rest]

**MSA SSR90 Self Rescuer**  
RP MSA 1118701

- Chemical oxygen apparatus for self-rescue, packed in a robust stainless steel container. Fitted with quick-start chlorate candle. MSA Chemical Oxygen has a maximum life of ten years.
- Weight during use: 3.4 kg.
- EN 401 Duration: 60 minutes [up to 5 hours at rest]

# Self Contained Breathing Apparatus (SCBA)

Designed to operate independently of the ambient air, an SCBA system gives the user the flexibility of mobility combined with isolation from any potentially hazardous atmosphere. Comprising a back plate, harness, mask and air delivery system (pressure reducer and Lung governed demand valve), an SCBA set will be used in conjunction with a cylinder of compressed air to complete the system. Cylinders vary according to composition and capacity and will typically provide air for durations between about 15 and 70 minutes according to the users breathing rate.

SCBA sets range from budget orientated systems with basic features and components designed for compliance purposes to models comprising fire retardant materials and extra robust hardware to be used in very hostile conditions. Common applications for SCBA include fire fighting, emergency response, offshore and marine industry and government departments like police and defence forces. An SCBA system will have a pressure gauge and an inbuilt warning whistle to let the user know when the air supply has fallen below a certain level. SCBA and their components are subject to regular inspections such as annual leak tests, diaphragm checks and a 6 or 9 year overhaul.

Some common accessories to compliment an SCBA system are cylinders as mentioned along with communication, personal monitoring and alarm devices.

## 3M™ Scott ProPak-fx T2 SCBA

The 3M™ Scott ProPak-Fx is a Type 2 open circuit, self-contained, compressed air breathing apparatus. It consists of a back plate, padded carrying harness and pneumatic system, containing a cylinder connector, reducer, pressure gauge, whistle and demand valve.

The ProPak-Fx can be configured in a number of different ways with various size single cylinders. There are also a range of variants available including Airline (AC), Split Demand Valve Coupling (SDC or Y2C), Quick Connect Option or Duo variants. The ProPak-Fx is used in conjunction with either Promask PP or Vision 3 PP face mask and a choice of composite or steel cylinders. Specifically designed as a professional fire fighting SCBA, the ProPak-Fx is also suitable for providing respiratory protection in any IDLH environment. ProPak-Fx also offers a Pivot and height adjustable waist belt for increased wearer comfort to suit most people.

### Features and Benefits:

- Designed for use by the Fire Service
- Rigid backframe construction
- Easily removable pneumatics
- Cost effective to service and maintain
- Adjustable padded shoulder straps
- Kevlar & Pyrogard blend wrap around harness
- Side arms for increased user comfort
- Reflective webbing
- Pivot and height adjustable waist belt for increased wearer comfort
- Certified to AS/NZS 1716:2012 and EN137:2006 Type 2 MED

# 3M™ Scott SCBA Compliance Kit

The 3M™ Scott Compliance Kit has everything you need in one kit. It comes complete with a Sigma 2 Type 2 SCBA set, a Promask LQF positive pressure Full Face mask and a 6.8L, 300 Bar carbon-wrapped cylinder in a large carry bag. Suitable for general industry and for short duration confined space entry work and rescue, petrochemical, oil and gas applications.

#### Features and Benefits:

- Designed for marine, industrial, confined space entry, rescue or industrial firefighting
- Proven high performance pneumatic system
- Compact first breath activated demand valve with bypass
- Ergonomically designed lightweight backplate and type 2 harness
- Kevlar blend flame retardant webbing with Kevlar cylinder band

#### Kit includes:

- Sigma 2 Type 2 compliant SCBA harness and pneumatics
- Promask PP with left-quick-fit port to suit demand valve
- 6.8 litre, 300 bar carbon composite breathing air cylinder with T valve
- Heavy duty rip-stop nylon carry bag
- 300 Bar carbon-wrapped cylinder

RP SCO 201224-22	EPIC 3 Lapel SM Harris P5400/7300, Unity, XG Series Radios

**3M™ EPIC Lapel Speaker Microphone**

- Rugged Lapel Speaker Microphone (LSM) option for users without an OEM LSM
- Works well with EPIC 3 Voice Amplifier
- Provides clear communication
- Supports EPIC wired accessories
- Front microphone and speaker for Remote Speaker Mic operation
- Top mounted Emergency Notification button for use with select field radios
- Durable IP66/67 rated system for use in demanding high temperature environments
- 50 hours of battery life with Alkaline AAA batteries

## EPIC related questions:

1. Is only voice amp needed?
2. What Radio is used?
3. Is the Radio used Bluetooth capable?
4. If so is a Lapel/Push to Talk (PTT) needed?
5. How many of each is needed?
6. What type of mask is needed, Promask, Vision or AV3000HT (only used on ProPak-f/fx-Eze Flo)?

\*Please note existing Promask/Vision and Vision AMS are not able to be upgraded to add Epic comms port, customers will need to purchase a new mask that has Epic comms bracket fitted.

**3M™ Scott EPIC 3 Voice Amplifier**

- Compact, high performance voice amplifier
- Automatic Shutoff reduces costs of battery replacement
- Intrinsically safe for use with alkaline and NiMH AAA batteries
- IP66/IP67 rated design is robust enough to withstand the most extreme applications
- Tactile On/Off button makes it easy to activate with gloved hands
- Angled directional speaker projects amplified voice forwards
- Compatible with Promask, Vision 3 and AV3000 positive pressure facemasks (with comms bracket)
- ATEX/IECEX certifications: Ex ia IIB T3 Ga IP66/67 Complies with IEC standards IEC 60079-0: 2007-10 Edition 5; and IEC 60079-11: 2011 Edition 6.0

### 3M™ Scott EPIC 3 Radio Interface Voice Amplifier

- Compact, SCBA mask mounted voice amplifier and wireless radio communications device
- Enhances SCBA facepiece voice communication intelligibility and loudness
- Advances safety through easy-to-use wireless communication interoperability with mobile field radios (requires use of Scott EPIC Lapel Speaker Mic to suit field radio)
- Improves user communications from the incident scene to remote locations via field radio
- IP66 and IP67 rated design is robust enough to withstand the most extreme applications
- Tactile On/Off button makes it easy to activate with gloved hands
- Angled directional speaker projects amplified voice forwards
- Advanced electronic noise suppression technology improves communication clarity and personnel safety Compatible with Promask, Vision 3 & AV3000 facemasks (with comms bracket)

Model #	Description

RP SCO 201276-01	EPIC 3 Radio Int Voice Amp Open Bracket AV3000HT

**3M™ Scott EPIC 3 Radio Direct Interface (RDI) Voice Amplifier**

- Compact, SCBA mask mounted voice amp and wireless radio-direct communications device
- Designed to work with encrypted Bluetooth® enabled Motorola APX digital radios direct from SCBA mask to radio
- Advanced electronic noise suppression technology improves communication clarity and personnel safety
- Durable IP66/67 rated system for use in demanding high temperature environments
- Tactile On/Off button makes it easy to activate with gloved hands
- Angled directional speaker projects amplified voice forwards
- Customisable, user friendly, easy to operate, system
- Compatible with Promask, Vision 3 & AV3000 facemasks (with comms bracket)

### 3M™ Sabrecom 2 Lapel Mic Style Radio Communications Interface

- 3MTM Sabrecom is a unique radio communications interface that fully integrates with your choice of 3M Scott Safety face mask. Available as a complete communications solution on the Vision 3 or Promask PP face masks, Sabrecom is approved to EN136 Class III.
- It is approved to meet all tests for flame and heat resistance, plus IP67 rating for water and dust penetration as well as being intrinsically safe to Ex iaIIC T4 (radio dependant).
- This system has a large push to talk button assembly with two PTT buttons which can be used independently as a lapel mic to enable the comms to be used when a BA facemask isn't being worn.
- Push to Talk are only ATEX approved if the radio is ATEX approved

- Large enough to carry SCBA, cylinder and mask

Model #	Description
RP SCO SCBABAG:L	Carry Bag Large SCBA 35Cm X 75Cm X 35Cm
RP SCO 2014810	SCBA Moulded Carry Case

### 3M™ Scott SCBA Wall Cabinet

- Universal breathing apparatus wall-mount cabinet
- Made from 3mm PVC reinforced with fibreglass
- Comes with clear plastic lid to protect SCBA from dust and dirt

Model #	Description
RP SCO SCBACAB	SCBA Wall Cabinet
RP SCO QTB454	Wall Bracket SCBA

### 3M™ Scott Trigene Solution & Wipes

- Antimicrobial respirator and surface wipes
- Available as ready-to-use wipes & pre-mixed solution or in concentrate form for dilution on-site
- TGA Registered - ARTG No: 232937 & 233129

Model #	Description
RP SCO 1017652EA	Trigene Wipes Drum (100)
RP SCO 2008248EA	Trigene Solution 5L Concentrat Clear
RP SCO TRIG:31	Trigene Pre-Mix 1 To 100 5L Green
RP SCO TRIGPM:1L	Trigene Pre-Mix 1 To 100 1 Litre Green

### 3M™ Scott Steel Cylinders

- Suitable for Scott SCBA and Scott Modulair Airline Trolley
- Complete with safety locking hand wheel

Model #	Description
RP SCO 2031535	Flite COV 200 bar 10 min steel cyl c/w pouch and reducer/hose Full
RP SCO 2031537	Flite COV 200 bar 15 min steel cyl c/w pouch and reducer/hose Full

### 3M™ Scott Carbon Fibre Cylinders

- Suitable for Scott SCBA and Scott Modulair Airline Trolley
- Constructed of an aluminium alloy inner shell overwrapped with carbon-fibre, fibreglass and epoxy resin
- Cylinder liner is coated with aluminium oxide to protect against moisture and corrosion
- Available with right angle valve (RAV) or T Valve 6.8L 300 Bar
- Supplied charged/full or empty.

Model #	Description
RP SCO 1118245RAV	Cylinder 6.8L 300 Bar Carbon RAV

## About GasClip

**Why GasClip is the name you can count on in portable gas detectors.**

With over 30 years of experience in the gas detection industry, GasClip know that they could bring a valuable product to the market. In 2009, Gas Clip Technologies was founded with the goal of revolutionizing portable gas detectors. Within just a few years, companies in industries of every kind have embraced their products because of their wide range of benefits, including greater worker safety, improved productivity, greater efficiency and lower cost of ownership.

**GasClip outperform and outlast the competition.**

GasClip created portable gas detectors with a difference. Consider their latest innovation, the Multi Gas Clip (MGC). It's the only portable gas detector with a battery life that can last months instead of hours. In fact, the MGC can go a full 2 months without a charge even without ever being turned off.

The MGC follows in the footsteps of our Single Gas Clip (SGC) Plus. You can put these portable gas detectors into hibernate mode when they're not in use so you can extend the life of the units. Even their SGC Dock and MGC Dock portable or wall mountable docking station are a

breakthrough. It lets you test 4 portable gas detectors at a time instead of one by one by one by one. That saves time and reduces testing gas.

**At work in the most demanding industries, the harshest environments.**

Whether you work in oil and gas, utilities, wastewater, telecommunications, marine, or other demanding industries, you need portable gas detectors that are reliable and durable. That's why GasClip built their portable gas detectors to withstand both the hottest and coldest working environments.

**Technology is part of their name for a reason.**

Innovation is the lifeblood of their business. GasClip continue to build the latest technology into their products. For example, the MGC uses a low power photometric technology to detect combustible gases (LEL). Instead of draining the battery with pellistor technology that's been around since the 1950s, the MGC uses a low power diode infrared source, which conserves power.

**Easy to use, simple to maintain.**

While GasClip units use the latest technology, they've made them simple to operate. They're also easy to maintain. That's why they can back the products with a 2-year guarantee.

### GAS CLIP SINGLE GAS DETECTORS SGC & SGC-P

Gas Clip Technologies Single Gas Clip Plus or SGC Plus, is the only maintenance free handheld gas detector available with "Hibernate" mode. "Hibernate" mode allows users to place this disposable single gas detector in a rested state when not in use. The SGC Plus is perfect for seasonal/turnaround contractors or rental fleets. When your job or turnaround is finished, simply synchronize the instrument with our IR Link or SGC Dock and put the detector in a rested state. When you are ready to use the detector again, simply press the power button to reactivate the detector. With the SGC Plus, you only pay for the time that the handheld gas detector is in use. Each SGC Plus will last for 24 months of use and comes with a warranty of 24 months of use or 3 years from activation (whichever comes first). However, this mode can only be enabled via IR communication with either the IR Link or SGC Dock accessories (not by a button push), so only authorized personnel can place the units in "hibernate" mode. The SGC Plus also provides the most advanced maintenance free disposable single gas detector on the market. Unlike other disposable single gas detectors, the SGC Plus combines a rugged design and reliability with advanced sensor resolution (0.1 ppm for H2S models). Advanced micro processing capabilities allow for quick unit configuration adjustments to comply with current and future industrial health and safety gas exposure regulations for workers in industrial environments.

Each SGC Plus comes with the following features:

- Unmatched sensor reliability for H2S and CO
- "Hibernate" mode
- Adjustable alarm set points
- Real-time gas reading capability
- 50% larger battery capacity
- 0.1 ppm resolution for H2S sensor and display
- Two-way IR communication for event downloads, bump tests, unit configuration and firmware updates
- Programmable unique 6 digit detector identification
- "Bump Check" confirmation/identification
- Optional calibration
- Calibration confirmation/identification
- Docking capability with Gas Clip Technologies SGC Dock
- Features
- Bump Check Reminder: All Single Gas Clip models come standard with the bump check reminder feature. When activated, if the detector has not been bump tested within the designated interval, the instrument will emit both a flash and show "buP" across the screen alerting the user, peer, or supervisor that the gas bump test is due. In addition to the flash, the TEST Icon will continually display in the upper left hand corner. This alert increases user accountability and allows for easier policy enforcement. Note the flash feature can be disabled within the IR Link software, if desired.
- Programmable unique 6 digit ID:
- Considering the rugged environment these instruments are often exposed to and used in, identification via serial number, sticker, or marker can be unreliable. With the unique ID feature, units can be identified with a simple push of a button. Available using both limited alpha and full numeric characters, each unit can be assigned a unique ID utilizing, for example an employee ID number, last 4 digits of SSN, or a job code. Unique ID's will also appear on event log reports and bump test logs. ID's will be displayed on the detector screen in segments of 3 digits at a time (first 3 digits, then last 3 digits).
- Adjustable alarm set points:
- To adapt with changing health and safety gas exposure regulations for workers in industrial environments, the Single Gas Clip alarm set points can be easily adjusted via the IR Link software or through the SGC Dock. Detectors can also be special ordered with custom alarm set points.

**GAS CLIP SINGLE GAS CLIP PLUS**  
**RP GC SGCP-H2S**  
**RP GC SGCP - CO**

Gas Clip Technologies Single Gas Clip Plus or SGC Plus, is the only maintenance free handheld gas detector available with "Hibernate" mode. Advanced micro processing capabilities allow for quick unit configuration adjustments to comply with current and future industrial health and safety gas exposure regulations for workers in industrial environments. Each SGC Plus comes with the following features:

- Unmatched sensor reliability for HS and CO
- "Hibernate" mode
- Adjustable alarm set points and real-time gas reading capabilities
- 50% larger battery capacity
- <0.1 ppm resolution for H2S sensor and display
- Two-way IR communication for event downloads, bump tests & updates
- Programmable unit identification
- Calibration optional
- "Bump check" confirmation/identification

**GAS CLIP SINGLE GAS CLIP**  
**RP GC SGC-H2S**  
**RP GC SGC-CO C**  
**RP GC SGC-O**

Whether it's the hottest environment or the coldest, our Single Gas Clip is designed and tested to provide worker safety in the harshest working conditions. At Gas Clip Technologies, we enhance customer safety by using the latest technology. We test 100% of our portable gas detectors, not just a random sample of units. That's why we can offer a low cost of ownership on our gas detectors. There are no hidden service charges, no maintenance fees- just reliable units that will help your facility workers and contractors do their jobs safely, productively and cost effectively. Unmatched sensor reliability for H2S, CO, & O2

- Adjustable alarm set points and real-time gas reading capabilities
- 50% larger battery capacity
- <0.1 ppm resolution for H2S sensor and display
- Two-way IR communication for event downloads, bump tests & updates
- Programmable unit identification
- Calibration optional
- "Bump check" confirmation/identification
- For unmatched safety, reliability and productivity, choose the world's most advanced single gas detector,
- The SGC from GasClip

**GAS CLIP SINGLE GAS DOCKING STATIONS**  
**RP GC SGC-WMDOCK - GasClip Single Gas**  
**Wallmount or fixed point Docking Station**

**Wall Mount SGC Dock:**

Gas Clip Technologies offers a wall mount solution for our SGC Dock. Instead of being housed in a Pelican® case, we provide a slim cabinet type case that can be easily mounted on a wall. This option can be selected at the time of order or can be ordered separately to convert your existing SGC Dock to a Wall Mount SGC Dock. This option is a perfect fit for facilities or office environments.

**GAS CLIP SINGLE GAS DOCKING STATIONS**  
**RP GC SGC-DOCK - GasClip Single Gas Portable**  
**Docking Station**

**SGC DOCK**

Gas Clip Technologies SGC Dock is an all in one docking station designed for maximum testing efficiency and portability. Housed in a rugged Pelican® case with robust USB memory, this station will be able to accurately test and record all monitor data while reducing the testing time and gas usage. Traditional docking stations are only designed to test one instrument at a time, resulting in time consuming testing periods as well as unnecessary usage of testing gas. Gas Clip Technologies has significantly improved both testing time and test gas usage with the SGC Dock; users can now test 4 instruments simultaneously saving both time and money. Each SGC Dock comes with the following standard features: Test 4 units at one time, up to 12 instruments in a minute, Easy 1 button operation, Robust rechargeable internal battery, hundreds of tests before recharging, Internal gas cylinder regulator and pressure gauge, 2 GB USB memory for bump test and event log storage, Optional unit configuration and firmware updates via GCT Manager Software, Rugged Pelican® case or Wall Mount Dock, No computer required to operate

**Features**

**Unit Configuration/Firmware Updates:**

In order to keep your fleet of gas detectors compliant with specific settings, we allow for the SGC Dock to program each unit during either bump testing or calibration. The programmable fields are as follows: User ID, Calibration Interval, Bump Interval, Self-Test Interval, Low Alarm, High Alarm, Show Sensor Readings, Hide Bump Due LED and Hide Clock. For example, if your company or facility requires each detector on site to have specific alarm set points and a bump test interval, instead of programming each unit individually, the instruments can be group programmed while simultaneously bump testing (4 units at a time per dock) using our GCT Manager software. As firmware updates become available, we can program each SGC Dock to update units during bump testing and calibration. Facility safety standard compliance for single gas detectors is now easily achievable.

**Event Data and Record Storage**

: In addition to performing tests, unit configurations and firmware updates, the SGC Dock also stores important information about both the docking station and units tested. All tests performed on the docking station can be accessed from either the USB directly or using the GCT Manager software. Each bump test and calibration event is recorded and logged by date, time and serial number. Along with the test records, the individual event logs from each unit are saved. At the time of the test, the detector transmits its' event log to the memory. By default, the station will save the previous 10 event logs.

# Multi Gas Clip

## The First portable multi gas detector with a battery life of months instead of hours.

The Gas Clip Technologies MGC Dock & MGC Pump Dock are unique all-in-one stand-alone docking stations designed for maximum testing efficiency and portability. It tests up to four units simultaneously, reducing the testing time and gas usage. With only two buttons, it's simple to train workers how to use it for regular bump tests, occasional calibrations, or to deactivate detectors. It can be optionally housed in a rugged case or a wall-mountable metal enclosure. Logs are stored on a USB flash drive which can easily be transferred to a computer for analysis. You can keep testing your multi gas detectors Done at a time, or you can

test them all in no time, when you use ultra-reliable Multi Gas Clip (MGC) portable gas detectors, from Gas Clip Technologies, together with the MGC Dock or MGC Wall Mount Dock. You name it, and the MGC Docks can do it. They accurately test, record and store information that is critical to maintain safety in your company. They provide individual monitor event logs, firmware, unit configurations and, of course, bump/calibration logs. The robust 4+ GB USB gives you all the memory you need and the lithium ion battery ensures thousands of tests before needing to be recharged.

### Gas Clip 4 Gas Detector MGC

#### Battery life for months instead of hours!

RP GC MGC-IR- Gas Clip Multi Gas Detector Infra Red Sensors

RP GC MGC-P - Gas Clip Multi Gas Detector Pellistor Sensor

Day in, day out, your workers have to charge their portable multi gas detectors so they can keep testing for the presence of combustible gases, H<sub>2</sub>S, CO, and O<sub>2</sub>. Unfortunately, sometimes they may forget to do so. Gas Clip Technologies can help prevent this safety risk with our new Multi Gas Clip (MGC). It has the longest battery life of any portable gas detector by a long shot.

The new MGC can go a full 2 months without a charge, even without ever having to be turned off. Shut down the unit nightly and the battery can last up to 4 months. What's the secret of the MGC's extended battery life? It uses low-power photo-metric technology for the detection of the combustible gases (LEL). Instead of draining the battery with archaic pellistor technology, the MGC uses an IR source. This conserves power, so the battery lasts and lasts and lasts.

The MGC also eliminates the need to frequently calibrate portable gas detectors. It can go 6 months without being calibrated. That saves time and increases efficiency. Each Multi Gas Clip, IR version, comes with the following features:

- 2 month battery life (continuous run time)
- 6 month calibration cycle
- Will work in inert environments, no need for oxygen
- Simple to use
- Bump/Calibration reminders
- Docking station compatible
- Programmable user ID

### Gas Clip 4 Gas Detector MGC PUMP

RP GC MGC\_IR\_PUMP - Gas Clip Multi Gas Detector Infra Red Sensors with internal Pump

RP GC MGC-P-PUMP - Gas Clip Multi Gas Detector Pellistor Sensor with Pellistor Sensors

#### A New Option in Portable Gas Detection

Twice a day, every day... that's how often you have to charge most portable gas detectors, until now. Introducing the Multi Gas Clip Pump (MGC Pump) from Gas Clip Technologies, the only portable multi gas detector with an internal sampling pump that can go an entire work week without a charge.

#### A Long-Lasting Family Tradition

The MGC Pump follows in the long line of portable gas detectors by Gas Clip Technologies that last and last and last. Being able to go a long time between charges is a family tradition.

#### The Secret to a Long Life

Like our MGC, the MGC Pump uses low-power photometric technology to detect combustible gases (LEL) rather than age- old pellistor technology. The MGC Pump uses an IR source which conserves power and helps the battery last and last.

#### Ergonomic Design Makes for a Good Fit

The MGC Pump is also designed for comfort. The reduced, sloping shape of the holding area at the bottom of the instrument makes the MGC Pump a comfortable fit in the hands of your workers. It is fully submersible and simple to operate. The MGC Pump offers a one button design and the largest LCD screen in the industry so it's easy to read.

#### Calibrate the MGC Pump Once Every 6 Months

Other multi gas detectors require calibration anywhere from 1 to 3 months. The MGC Pump can go 6 months without being calibrated. This is an added benefit of IR sensing technology because IR is immune to pellistor sensor poisons such as silicone or H<sub>2</sub>S.

#### GAS CLIP MGC DOCK

**RP GC MGC-DOCK** - MGC Portable Docking station for MGC units

**RP GC MGC-DOCK-HP** - High Pressure MGC Portable Docking station for MGC units

**RP GC MGC-DOCKCONV-HP - Conversion to High Pressure Dock**

The Gas Clip Technologies MGC Dock is an all-in-one stand-alone docking station designed for maximum testing efficiency and portability. It tests up to four units simultaneously, reducing the testing time and gas usage. With only two buttons, it's simple to train workers how to use it for regular bump tests, occasional calibrations, or to deactivate detectors. It can be optionally housed in a rugged Pelican® case or a wall-mountable metal enclosure. Logs are stored on a USB flash drive which can easily be transferred to a computer for analysis

#### Each Dock comes with the following standard features:

- Test 4 units at one time, up to 12 instruments in a minute
- Easy 1 button operation
- Robust rechargeable internal battery, up to 1500 tests before recharging
- Internal gas cylinder regulator and pressure gauge
- USB flash memory for bump test and event log storage
- Optional unit configuration and firmware updates via GCT Manager Software
- Rugged Pelican® case
- No computer required to operate

#### GAS CLIP MGC PUMP DOCK WALL MOUNT

**RP GC MGC-WM-DOCK-PUMP** - MGC PUMP DOCK Wall Mountable Docking station for MGC Pump units

**RP GC MGC-WM-DOCK-HPPUMP** - High Pressure MGC PUMP Wall Mountable Docking station for MGC Pump units

**RP GC MGC-DOCKCONV-HP - Conversion to High Pressure**

Wall Mount MGC PUMP Dock: Gas Clip Technologies offers a wall mount solution for our MGC Pump Dock. Instead of being housed in a portable case, we provide a slim cabinet type case that can be easily mounted on a wall. This version is a perfect fit for facilities or office environments and is available in a high pressure version.

- High performance Dräger XXS Sensors
- No lifetime limitation with simple battery, sensor and filter replacement
- 8-15 second function test with the

#### GAS CLIP MGC PUMP DOCK

- Rugged case or Wall Mount Dock case
- No computer required to operate

#### Features

- Unit Configuration/Firmware Updates: In order to keep your fleet of gas detectors compliant with specific settings, we allow for the MGC Pump Dock to program each unit during either bump testing or calibration. The programmable fields are as follows: User ID, Calibration Interval, Bump Interval, Self-Test Interval, Low Alarm, High Alarm, Show Sensor Readings, Hide Bump Due LED and Hide Clock.
- For example, if your company or facility requires each detector on site to have specific alarm set points and a bump test interval, instead of programming each unit individually, the instruments can be group programmed while simultaneously bump testing (4 units at a time per MGC Pump Dock) using our GCT Manager software. As firmware updates become available, we can program each MGC Pump Dock to update units during bump testing and calibration.
- Facility safety standard compliance for single gas detectors is now easily achievable..

#### GAS CLIP VEHICLE CHARGER

**RP GC MGC-V-CHARGER1** -

Gas Clip Multi Gas Detector vehicle charger

For your workers on the go, we have the option of charging using the vehicle charger (12V only).

**GAS CLIP MGC DOCK WALLMOUNT**  
**RP GC MGC-WMDOCK**  
**RP GC MGC-WMDOCK-HP**  
**RP GC MGC-DOCKCONV-HP - Conversion to High Pressure**

- Wall Mount MGC Dock: Gas Clip Technologies offers a wall mount solution for our MGC Pump Dock. Instead of being housed in a portable case, we provide a slim cabinet type case that can be easily mounted on a wall. This version is a perfect fit for facilities or office environments and is available in a high pressure version.
- - High performance Dräger XXS Sensors
- - No lifetime limitation with simple battery, sensor and filter replacement
- - 8-15 second function test with the

**GAS CLIP MGC CONFINED SPACE ENTRY KIT C/W CASE**  
**RP GC MGC-CSK-GAS - Gas Clip Multi Gas Detector confined space entry kit**

Everything you need to go along with your Multi Gas Clip (not include GCT IR d) for remote sampling. Includes: Hard-sided carrying case with foam insert, 3 ft. calibration hose with quick connect, hand aspirator pump, 10 ft. sampling hose, calibration cap, air stone filter, 1 ft. sampling probe, GCT IR Link, 0.5 lpm regulator. Kit also sold without gas,

**GAS CLIP GCT IR LINK**  
 RP GC GCT IR LINK - Gas Clip Multi Gas Detector confined space entry kit  
 Connected to your computer by USB, the GCT IR Link communicates directly with the Multi Gas Clip (MGC) and MGC Dock to program special alarm set points and user options, as well as, to download event logs & data logs.

**GAS CLIP MGC SPARE PARTS AND ACCESSORIES**

Model #	Description
RP MGC-AL-CLIP	MGC Alligator clip complete with Screw
RP GC MGC-FILTER-10	Filters Pack of 10 individual filters
RP GC MGC-FILTER-50	Filters Pack of 50 individual filters
RP GC MGC-HAK	Hand Aspirator Kit
RP GC MGC-PROBE-1	1ft remote Sampling Probe
RP GC MGC-PROBE-RF	Probe replacement gasket and filter
RP GC MGC-WT	In-Line Hydrophobic Syringe Filter
RP GC MGC-PF	Air Stone Particulate Filter
RP GC MGC-CHRG-STATION	Multi Gas Charging Station
RP GC MGC-CHRG-MULTI	Multi gas Multi-Charger

**Dräger X-Dock**

The Dräger X-dock® series provides you with full control of your portable Dräger gas detection instruments. Automatic bump tests and calibrations with reduced test gas consumption and short testing times save time and money. Comprehensive documentation and evaluations provide you with a clear overview.

- \* Complete fleet management - from testing to documentation
- \* Single module (X-dock 5300) or multiple module (up to 10) with X-dock 6300/600
- \* Up to 6 gases plus compressed air inlet
- \* USB and network connections enable multiple usage
- \* Tests are started by closing the lid for easy operation
- \* Mix and match from Pac, X-am 125 or X-am 8000 modules
- \* Touch screen
- \* Significant time and cost reduction due to faster testing and low flow rate
- \* Choose between two software solutions: X-dock manager or Cloud based - Gas detection connect

Model #	Description
RP DRA 8321882	Dräger X-dock® 5300 X-am® 8000, X-dock® Master including X-am® 8000 Module and power supply. 3 test gas connections. Limited to one module.
RP DRA 8321880	X-dock® 5300 X-am® 125, X-dock® Master including X-am® 125 module and power supply. 3 test gas connections. Limited to one module.
RP DRA 8321881	X-dock® 5300 Pac®, X-dock® Master with Pac® module and power supply. 3 test gas connections. Limited to one module.
RP DRA 8321900	X-dock® 6300 Master, 3 test gas connections. Can be expanded to 10 modules
RP DRA 8321901	X-dock® 6600 Master, 6 test gas connections. Can be expanded to 10 modules
RP DRA 8321893	Dräger X-dock® Module X-am® 8000,
RP DRA 8321894	Dräger X-dock® Module X-am® 8000 (+), allows charging of X-am® 8000 devices
RP DRA 8321890	X-dock® Module X-am® 125,
RP DRA 8321891	X-dock® Module X-am® 125+, allows charging X-am® 125 devices
RP DRA 8321892	X-dock® Module Pac®,

**Dräger Tubes**

Tried and tested a million times: Worldwide, the Dräger Short-term Tubes have proven to be a very cost-effective and reliable method for the measurement of gases. Decreasing occupational exposure values, special customer requirements and new legal regulations made it necessary to develop even more sensitive Dräger-Tubes.

### Dräger Pac® 6000

The disposable personal single-gas detection device, Dräger Pac® 6000, measures CO, H<sub>2</sub>S, SO<sub>2</sub> or O<sub>2</sub> reliably and precisely, even in the toughest conditions. The robust design, quick sensor response times, and a powerful battery ensure maximum safety for up to two years with virtually no maintenance required. \* DraegerSensors XXS provide long operating life and fast response time \* Long battery service life for low operational costs \* Illuminating D-light shows device is tested and ready for use \* Clear colour coding prevents mistakes \* Easily replaceable filter membrane protects the sensor \* Large display shows all important information (language free) \* Robust IP68 housing with handy design for tough conditions \* 360° alarm signal can be easily seen from all sides \* Event logger for analysis and reports \* Fast function test saves time and money

Model #	Description
RP DRA 8326321	Dräger Pac® 6000 CO 0 - 2,000 ppm
RP DRA 8326320	Dräger Pac® 6000 H <sub>2</sub> S 0 - 100 ppm
RP DRA 8326322	Dräger Pac® 6000 O <sub>2</sub> 0 - 25 Vol.-%
RP DRA 8326323	Dräger Pac® 6000 SO <sub>2</sub> 0 - 100 ppm

### Dräger Pac® 6500

The robust Dräger Pac® 6500 is your reliable companion under tough conditions. The personal single-gas detection device measures CO, H<sub>2</sub>S, SO<sub>2</sub> or O<sub>2</sub> quickly and precisely. Measured data can easily be transmitted into the Dräger Gas Detection Connect system via Bluetooth®. Quick sensor response times and a powerful battery also ensure safety. \* DraegerSensors XXS provide long operating life and fast response time \* Long battery service life for low operational costs \* Illuminating D-light shows device is tested and ready for use \* Clear colour coding prevents mistakes \* Easily replaceable filter membrane protects the sensor \* Large display shows all important information (language free) \* Robust IP68 housing with handy design for tough conditions \* 360° alarm signal can be easily seen from all sides \* Data logger and event logger for analysis and reports \* Fast function test saves time and money \* Bluetooth® communication available as an option for live monitoring.

Model #	Description
RP DRA 8326331	Dräger Pac® 6500 CO 0 - 2,000 ppm
RP DRA 8326330	Dräger Pac® 6500 H <sub>2</sub> S 0 - 100 ppm
RP DRA 8326332	Dräger Pac® 6500 O <sub>2</sub> 0 - 25 Vol.-%
RP DRA 8326333	Dräger Pac® 6500 SO <sub>2</sub> 0 - 100 ppm

### Dräger Pac® 8000

With the robust Dräger Pac® 8000, you'll be well equipped for tough conditions: this non-disposable, personal single-gas detection device is a reliable and precise instrument, which detects hazardous concentrations of 29 different gases, including special gases like NO<sub>2</sub>, O<sub>3</sub> or COCl<sub>2</sub>. Measured data can easily be transmitted into the Dräger Gas Detection Connect system via Bluetooth®. \* DraegerSensors XXS provide long operating life and fast response time \* Long battery service life for low operational costs \* Illuminating D-light shows device is tested and ready for use \* Clear colour coding prevents mistakes \* Easily replaceable filter membrane protects the sensor \* Sensors for special gases \* Large display shows all important information (language free) \* Robust IP68 housing with handy design for tough conditions \* 360° alarm signal can be easily seen from all sides \* Data logger and event logger for analysis and reports \* Fast function test saves time and money \* Bluetooth® communication available as an option for live monitoring.

Model #	Description
RP DRA 8326350	Dräger Pac® 8000 NO, 0 - 50 ppm
RP DRA 8326351	Dräger Pac® 8000 CO <sub>2</sub> , 0 - 5 Vol.-%
RP DRA 8326352	Dräger Pac® 8000 Cl <sub>2</sub> , 0 - 20 ppm
RP DRA 8326353	Dräger Pac® 8000 HCN, 0 - 50 ppm
RP DRA 8326354	Dräger Pac® 8000 NH <sub>3</sub> , 0 - 300 ppm
RP DRA 8326355	Dräger Pac® 8000 PH <sub>3</sub> , 0 - 20 ppm
RP DRA 8326356	Dräger Pac® 8000 OV, 0 - 200 ppm
RP DRA 8326357	Dräger Pac® 8000 OV-A, 0 - 200 ppm
RP DRA 8326358	Dräger Pac® 8000 NO <sub>2</sub> , 0 - 50 ppm
RP DRA 8326359	Dräger Pac® 8000 Ozone, 0 - 10 ppm
RP DRA 8326360	Dräger Pac® 8000 Phosgene, 0 - 10 ppm

### Dräger Pac® 8500

The Dräger Pac® 8500 single-gas detection device is a reliable and precise instrument even under the toughest of conditions. Measured data can easily be transmitted into the Dräger Gas Detection Connect system via Bluetooth®. The device can be equipped with a hydrogen-compensated CO sensor or a Dräger dual sensor. This gives you the option of measuring two gases at once: H<sub>2</sub>S with CO, H<sub>2</sub>S with O<sub>2</sub> or O<sub>2</sub> with CO. \* DraegerSensors XXS provide long operating life and fast response time \* Measurement of carbon monoxide with significantly reduced cross sensitivity \* Long battery service life for low operational costs \* Illuminating D-light shows device is tested and ready for use \* Clear colour coding prevents mistakes \* Easily replaceable filter membrane protects the sensor \* Sensors for special gases \* Large display shows all important information (language free) \* Robust IP68 housing with handy design for tough conditions \* 360° alarm signal can be easily seen from all sides \* Data logger and event logger for analysis and reports \* Fast function test saves time and money \* Bluetooth® communication available as an option for live monitoring.

Model #	Description
RP DRA 8326365	Dräger Pac® 8500 H <sub>2</sub> S/CO, 0 - 100 ppm H <sub>2</sub> S 0 - 2,000 ppm CO
RP DRA 8326366	Dräger Pac® 8500 O <sub>2</sub> /CO, 0 - 25 Vol.-% O <sub>2</sub> 0 - 2,000 ppm CO
RP DRA 8326367	Dräger Pac® 8500 CO-H <sub>2</sub> CP, 0 - 2,000 ppm

**Dräger X-am@ 2500**

The Dräger X-am@ 2500 was especially developed for use as personal protection. The 1 to 4 gas detector reliably detects combustible gases and vapours, as well as O<sub>2</sub>, CO, H<sub>2</sub>S, NO<sub>2</sub> and SO<sub>2</sub>. Reliable and fully mature measuring technology, durable sensors and easy handling ensure a high degree of safety with extremely low operating costs.

- 1 to 4 gases at the same time flammable gases - catalytic, CO, H<sub>2</sub>S, O<sub>2</sub>, SO<sub>2</sub>, NO<sub>2</sub>
- Reliable power supply
- Industrial rugged and waterproof to IP 67
- Extended data storage
- Poisoning-resistant sensor for flammable gases with more than 4 years expected sensor life time
- Approved for the measurement of flammable vapors
- Cross sensitivity calibrations without manual calculations on flammable vapors - simple and safe
- Low operating cost: more than 5 years expected sensor life time for CO, H<sub>2</sub>S, O<sub>2</sub> - Diffusion or pump mode with external pump

Model #	Description
RP DRA 8323919	Dräger X-am@ 2500 (83 23 918) incl. power and charging kit (83 18 785)
RP DRA 8323900	Dräger X-am@ 2500 Flex Choice of up to four sensors (1 slot for CatEx and 3 slots for XXS sensors). Can be modified later with other sensors. Includes calibration certificate. Power supply as an option.

**Dräger X-am@ 5600**

Featuring an ergonomic design and innovative infrared sensor technology, the Dräger X-am 5600 is the smallest gas detection instrument for the measurement of up to 6 gases. Ideal for personal monitoring applications, this robust and water-tight detector provides accurate, reliable measurements of explosive, combustible and toxic gases and vapors as well as oxygen.

- 1 to 6 gases at the same time with advanced sensor options:
- Hydrocarbons; CO<sub>2</sub> or Dual Hydrocarbons & CO<sub>2</sub> with advanced Infrared technology, CO, H<sub>2</sub>S, O<sub>2</sub>, SO<sub>2</sub>; NO<sub>2</sub>; NO; PH<sub>3</sub>; HCN; NH<sub>3</sub>; CO<sub>2</sub>; Cl<sub>2</sub>; organic vapors- OV and OV-A; H<sub>2</sub>; Odorant; Amine; Phosgene; Ozone
- Small and lightweight with Infrared technology - for advanced sensor longevity, extended calibration intervals and IR sensor lifetime= instrument lifetime
- Single or dual sensor - accurate measurement results, also in combination with Hydrogen
- Measuring methane, propane and ethylene in %LEL and in Vol% range
- Versatile : Sensor types with the help of PC software flexibly changeable
- Various applications: e.g. possible in area monitor X-zone 5500/5800
- Diffusion or pump mode with external pump

Model #	Description
RP DRA 8326365	Dräger X-am 5600 with IR EX,O <sub>2</sub> ,dual H <sub>2</sub> S-LC/CO-LC + Battery Kit
RP DRA 8326366	Dräger X-am 5600 with dual IR Ex/CO <sub>2</sub> , O <sub>2</sub> , dual H <sub>2</sub> S-LC/CO-LC + Battery Kit
RP DRA 8326367	X-am 5600 - Configurable kit - add sensors as required

**Dräger X-am@ 5000**

The Dräger X-am@ 5000 belongs to a generation of gas detectors, developed especially for personal monitoring applications. This 1- to 5-gas detector reliably measures combustible gases and vapors as well as oxygen and harmful concentrations of toxic gases, organic vapors, Odorant and Amine.

- 1 to 5 gases at the same time with advanced sensor options:
- Flammable gases- catalytic, CO, H<sub>2</sub>S, O<sub>2</sub>, SO<sub>2</sub>; NO<sub>2</sub>; NO; PH<sub>3</sub>; HCN; NH<sub>3</sub>; CO<sub>2</sub>; Cl<sub>2</sub>; organic vapors- OV and OV-A; H<sub>2</sub>; Odorant; Amine; Phosgene; Ozone
- Durable sensor technology
- Industrial rugged and waterproof to IP 67
- Measuring methane in %LEL and in Vol% range
- Flexible sensor change
- Various applications: e.g. possible in area monitor X-zone 5500/5800
- Diffusion or pump mode with external pump

Model #	Description
RP DRA 3501264	X-am 5000 4-Gas complete with NiMH Battery Kit (Cat-Ex 125 PR,O <sub>2</sub> ,dual H <sub>2</sub> S LC/CO LC, Batt kit 8318785)
RP DRA 8320000	X-am 5000 - Configurable kit - add sensors as required

**Dräger X-am@ 8000**

Clearance measurement was never this easy and convenient: The 1 to 7 gas detector detects toxic and flammable gases as well as vapours and oxygen all at once - either in pump or diffusion mode. Innovative signalling design and handy assistant functions ensure complete safety throughout the process.

\* Multi-gas detector - 1 to 7 gases \* PID (high concentration or low concentration) and IR sensors usable at the same time \* Specially designed for use with a pump, optimised for clearance measurement \* Economical Fleet Management \* Clearance measurement, release and documentation in no time \* Clear signalling design with colour screen \* Specialist for high and low hydrocarbon concentrations and leak detection \* Inductive charging protects against wear and tear \* Long battery run time \* Event report on the screen, including drop detection \* Illuminated D-light to ensure compliance \* Simple switch from pump to diffusion within seconds \* Bluetooth module \* Stealth mode, sensor selection possible

Model #	Description
RP DRA 8325800	Dräger X-am@ 8000 consists of: Device with power supply (Lithium-ion battery), data logger, shoulder strap, manufacturer's certificate, certificate of calibration, and charger (optional). A fully functioning device requires up to 5 sensors (add as required) and an optional integrated pump.

# Thermal Imaging

Today's firefighters operate in extreme conditions, where temperatures are capable of rising faster and where visibility is reduced in seconds. Conditions within these environments can put firefighters in situations where their safety is compromised and they must have a complete understanding of the environment. 3M Scott's Thermal Imaging Cameras come with the very latest in advanced thermal imaging, with exclusive features such as hot spot tracking, Intelligent Focus™ and tactical colourisation. Our thermal imaging cameras provide firefighters with the ultimate situational awareness.

## Ultimate combination of situational awareness.

Today's firefighters operate in extreme conditions, where temperatures are capable of rising faster and where visibility is reduced in seconds. Conditions within these environments can put firefighters in situations where their safety is compromised and they must have a complete understanding of the environment.

Thermal imaging cameras (TICs) powered by ISG technology provide users with the ultimate combination of situational awareness, lightweight design and robust features. The superior image quality enables firefighters to fully interpret a fire scene and make more-informed tactical decisions.

### What is thermal energy?

Thermal energy, also known as infrared energy, is light that is invisible because its wavelength is too long to be detected by the human eye. It is part of the electromagnetic spectrum that we perceive as heat. Unlike visible light, where energy is emitted by objects only at a very high temperature, infrared energy is emitted by all objects at ordinary temperatures. The higher the object's temperature, the greater the infrared radiation emitted.

### How does a thermal camera work?

TIC detect infrared/thermal radiation temperature variations converting into electrical signals, signals convert back into images on a screen.

Thermal cameras do not depend on visible light, objects in total darkness or surrounded in smoke can be seen. TICs cannot see through walls, glass, and water, anything that absorbs thermal radiation.

3M™ Scott Fire & Safety Thermal Imaging Camera features tactical colourisation, enabling quick response.

The Hot Spot Tracker identifies the hottest object in the scene, tracks it, and displays its temperature, whilst conversely the Cold Spot Tracker locates and pinpoints thread or valve gas leaks in seconds.

### TIC operational tasks include:

- Surveillance operations - hiding burglars, fleeing from a crime scene
- Firefighting - quickly identifying hot spots
- Search & Rescue - locating people in smoke filled or dark environments
- Maritime navigation - clearly see other vessels or people in the water at night
- Clandestine operations - find households or building with suspiciously high temperatures
- Disease control - quickly scan incoming passengers at airports for elevated temperatures.

## 3M™ Scott™ V320 Thermal Imaging Camera

The V320, featuring a 320x240 sensor, and equipped with extended battery life, provides firefighters with mission critical information that enables firefighters to make better decisions in extreme conditions.

- 320x240 High Resolution Sensor Provides clear images enabling firefighters to navigate through limited-visibility conditions.
- Extended Battery Life Up to Eight-hour runtime with a removable rechargeable battery.
- Single Button Single button ON/OFF provides easy deployment. No menus required.
- 3.5" High-Contrast Display Ensures the image on the display can be seen in multiple light conditions.
- Fast Startup Time Ready for use within five seconds of activating the power button - without the use of a standby mode!
- Lightweight, Durable Design Designed to withstand the extreme conditions.
- Ergonomics Ergonomically designed and balanced for comfort with a gloved hand.

**3M™ Scott X380 Thermal Imaging Camera**

- The X-Series thermal imaging cameras provide firefighters with the ultimate combination of situational awareness, lightweight design and robust features. The superior image quality enables firefighters to fully interpret a fire scene and make more-informed tactical decisions.
- X380-Series thermal imaging cameras are powered by ISG technology - a pioneer and leader in thermal imaging
- Available as a 3 or 5 button system
- Superior image quality enables firefighters to fully interpret a fire scene and make more-informed tactical decisions
- Hot Spot Tracker - Immediately identify the hottest part of the scene and determine the true seat of the fire
- Cold Spot Tracker - Locate and pinpoint gas leaks in seconds
- High Resolution - 384 x 288 pixel sensor and display with fast-refresh rate ensures a clear and accurate scene image is delivered at all times
- Tactical Colourisation of scene highlights temperature ranges clearly up to and exceeding 1000°C
- Intelligent Focus™ - ensures objects are displayed in crystal clear detail without the need for focus adjustment
- Automatically and quickly switch between high and low temperature ranges by placing the crosshairs on the object you wish to measure
- Built-in laser pointer to assist aiming and communication
- Lightweight Design - only 980 grams

**Dräger Alcotest 4000**

- Made in Germany and AS3547:2019 certified with a 12-monthly calibration period. The Dräger Alcotest® 4000 personal breathalyser offers responsible drivers a reliable way to test their breath alcohol and gives them the assurance of being legal to drive. This is ensured by precise measurement technology identical to that used by the police: over 30 million breath alcohol tests a year.
- Breath Alcohol Testing Device for Personal Use.
- Measurement technology identical to that used by the police: 30 million breath alcohol tests a year.
- AS-3547:2019 approved with a 12-monthly calibration period.

Model #	Description
RP DRA 3706951	Dräger Alcotest 4000

**Dräger Alcotest 6000**

- The Dräger Alcotest® 6000 is our entry-level professional breath alcohol testing device. It allows the professional user to test with speed and precision. Featuring a 12-monthly calibration interval and data logging + download capability, the measuring technology of this small and user-friendly portable measuring device has already been proven worldwide and has been sold over 1,000,000 times. AS3547:2019 certified.
- Entry-level professional breath alcohol testing device.
- Allows users to perform a breath alcohol test with accuracy and reliability. Data-logging and download capacity for 500 tests.
- AS-3547:2019 approved with a 12-monthly calibration period.

RP DRA 3706961	Dräger Alcotest 6000

**Dräger DrugCheck 3000**

- Use the Dräger DrugCheck® 3000 to find out within 3 minutes if a person is under the influence of drugs. Offering outstanding accuracy and analytical performance, this compact and quick oral-fluid device produces results in a non-invasive and easy manner. Used by Australian Police for roadside testing.
- Scan, test and record the data: mobile data logging on your smartphone is that simple. The innovative Dräger DrugCheck® smartphone app allows you to scan, analyse, log and archive your test results in just a few steps. Available free of charge from the App Store and Google Play Store.
- Fast & Hygienic
- Outstanding accuracy and analytical performance
- Intuitive and easy to use
- Quick oral-fluid device
